Agenda

Sprint Status	Current Sprint - Sprint 7 (June 24, 2015 - July 8, 2015) LexEVS S13-500 Agile Development - Sprint Status#SprintStatus-Sprint7

Sprint Planning	Sprint 8 Planning Upcoming Sprint - Sprint 8 (July 9, 2015 - July 22, 2015) LexEVS 6.4 Agile Development - Sprint Status Issue Grooming • Prioritize JIRA issues key summary type created reporter priority status labels Jira project doesn't exist or you don't have permission to view it. View these issues in Jira LEXEVS-946 - Associated with this issue, any vocab with multiple name spaces isn't working. If we were to fix OWL2 to work for any OWL1 load, this would potentially time consuming with all the loads and verification. NCI's concern is that we may have to implement the solution twice with the original plan. Hierarchy's for these vocabularies hasn't been displayed for a long time. The decision is to do the OWL2 investigation (LEXEVS-985) in this sprint.
6.3 Deployment Status • NCI Maven Mirror Update	We built this service and gave to NCI the war file. They have deployed to the DEV service. Cory will verify the service is working as expected.
CTS2 Doc Service - NodeJS/NPM versions • Heroku service life • Upgrade to latest IO docs	There is an security issue with the current version of node.js and npm that is being used. When time permits, we will upgrade to the latest versions. This will also force us to upgrade IOdocs and the cts2 service configuration file. We will continue to keep the heroku site running in the meantime.
Discuss new search issues - Status (Cory) • NCITERM-679 - Jira project doesn't exist or you don't have permission to view it. • NCIM-204 - Jira project doesn't exist or you don't have permission to view it. • LEXEVS-986 - Jira project doesn't exist or you don't have permission to view it.	literalContains is the match algorithm that would need to be used if searching for special characters. There may be performance hits when using this algorithm. We could consider using literalContains in the browser only when special characters are entered. Kim will evaluate the performance of using the literalContains algorithm in the browser.
MRMap content - Status (Scott)	Scott has implemented and checked in a fix for this issue. Brian can show us what the load looks like in the SNOMED tool in a future meeting. We will need to determine what parts to use in the browser now.. Model changes may be needed for some further MRMAP changes.
VPN and network evaluation • Update from Gilberto and Jason	No updates. Jason will follow up.
External Request • ?	U of Michigan asked for a list of LexEVS users.
