Importing Microsoft Excel Worksheets into Confluence

You can import a Microsoft Excel worksheet into Confluence in multiple ways:

- If you want to import a worksheet into Confluence as a table and edit the table in Confluence from now on, you can paste the cells into the Confluence editor and save the page.
- If you want to import a worksheet into Confluence as a file, you can import it with the Excel macro. An example follows.

One	Two	Three
1	2	3
4	5	6
7	8	9

For instructions, refer to the Excel for Confluence documentation:
