## LexEVS Meeting Minutes

	LexEVS. Prototype stage as of now. Using system to relate concepts to 'cause of death' for example by association. Want to use the entire ICD10-CM. How is the best way to link concepts in LexEVS? Their vocabulary would eventually be loaded into LexEVS. What would the association assertion look like in Protégé? How is the best way to do this? Possibly adapt the LexEVS OWL loader to recognize cross-ontology relationship assertions.
