

# NRDS

## Updating CDEs In Rave

05/27/2015

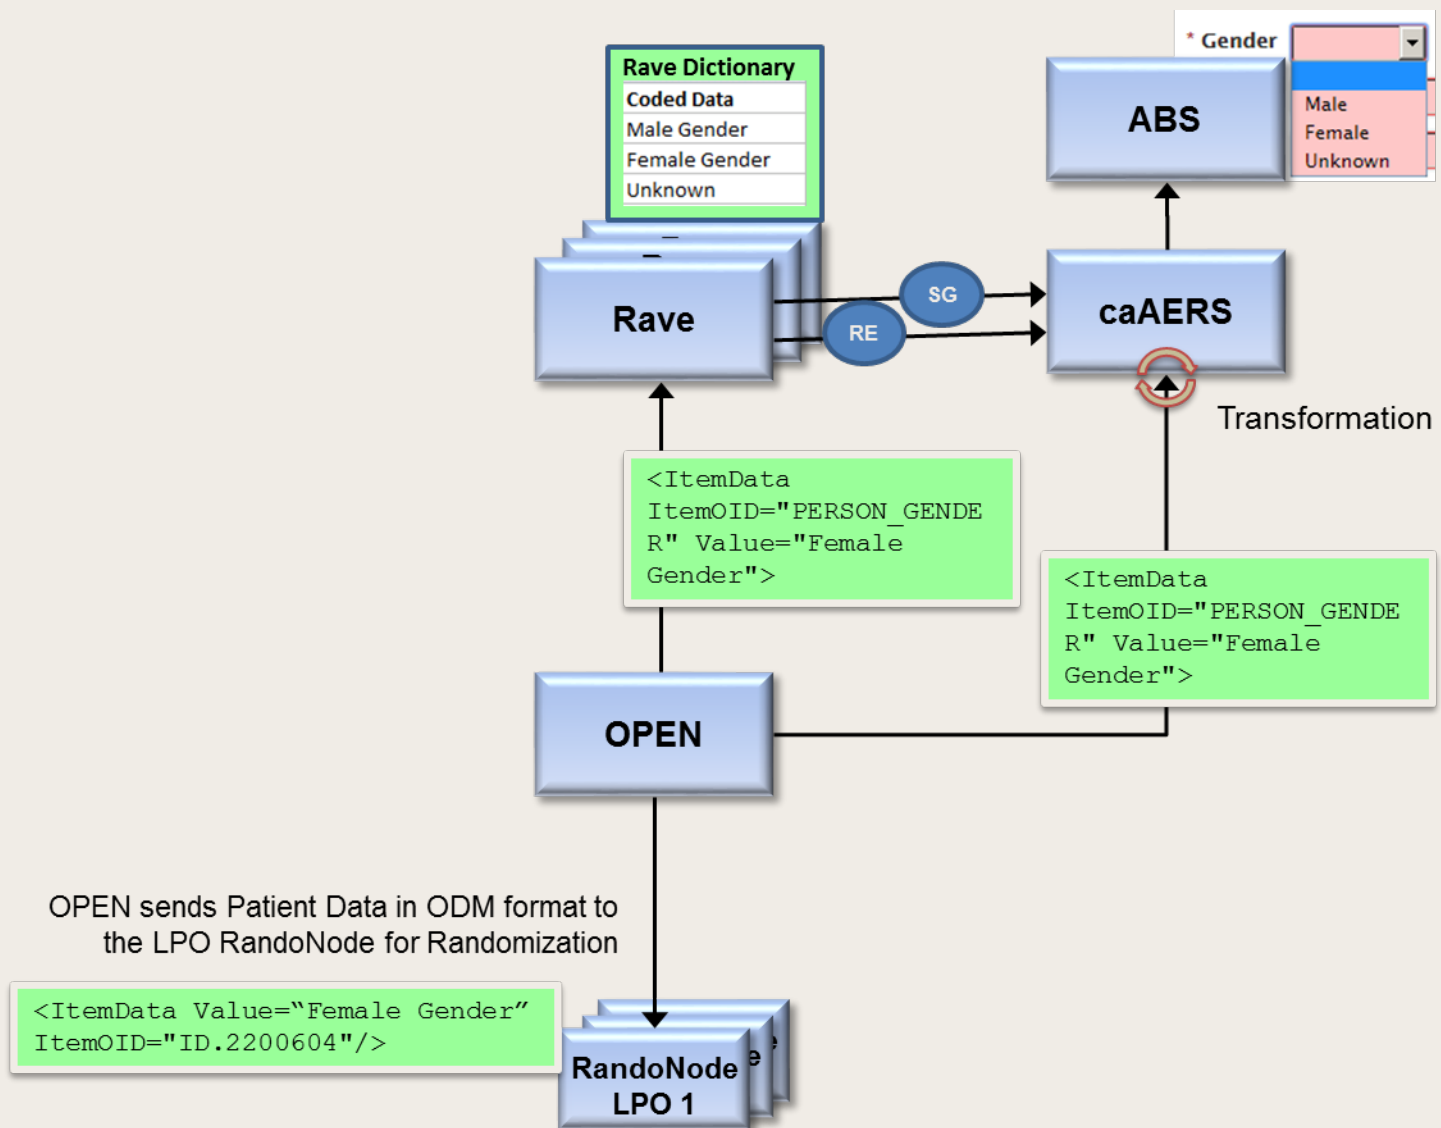

# Background – Current CDE Usage

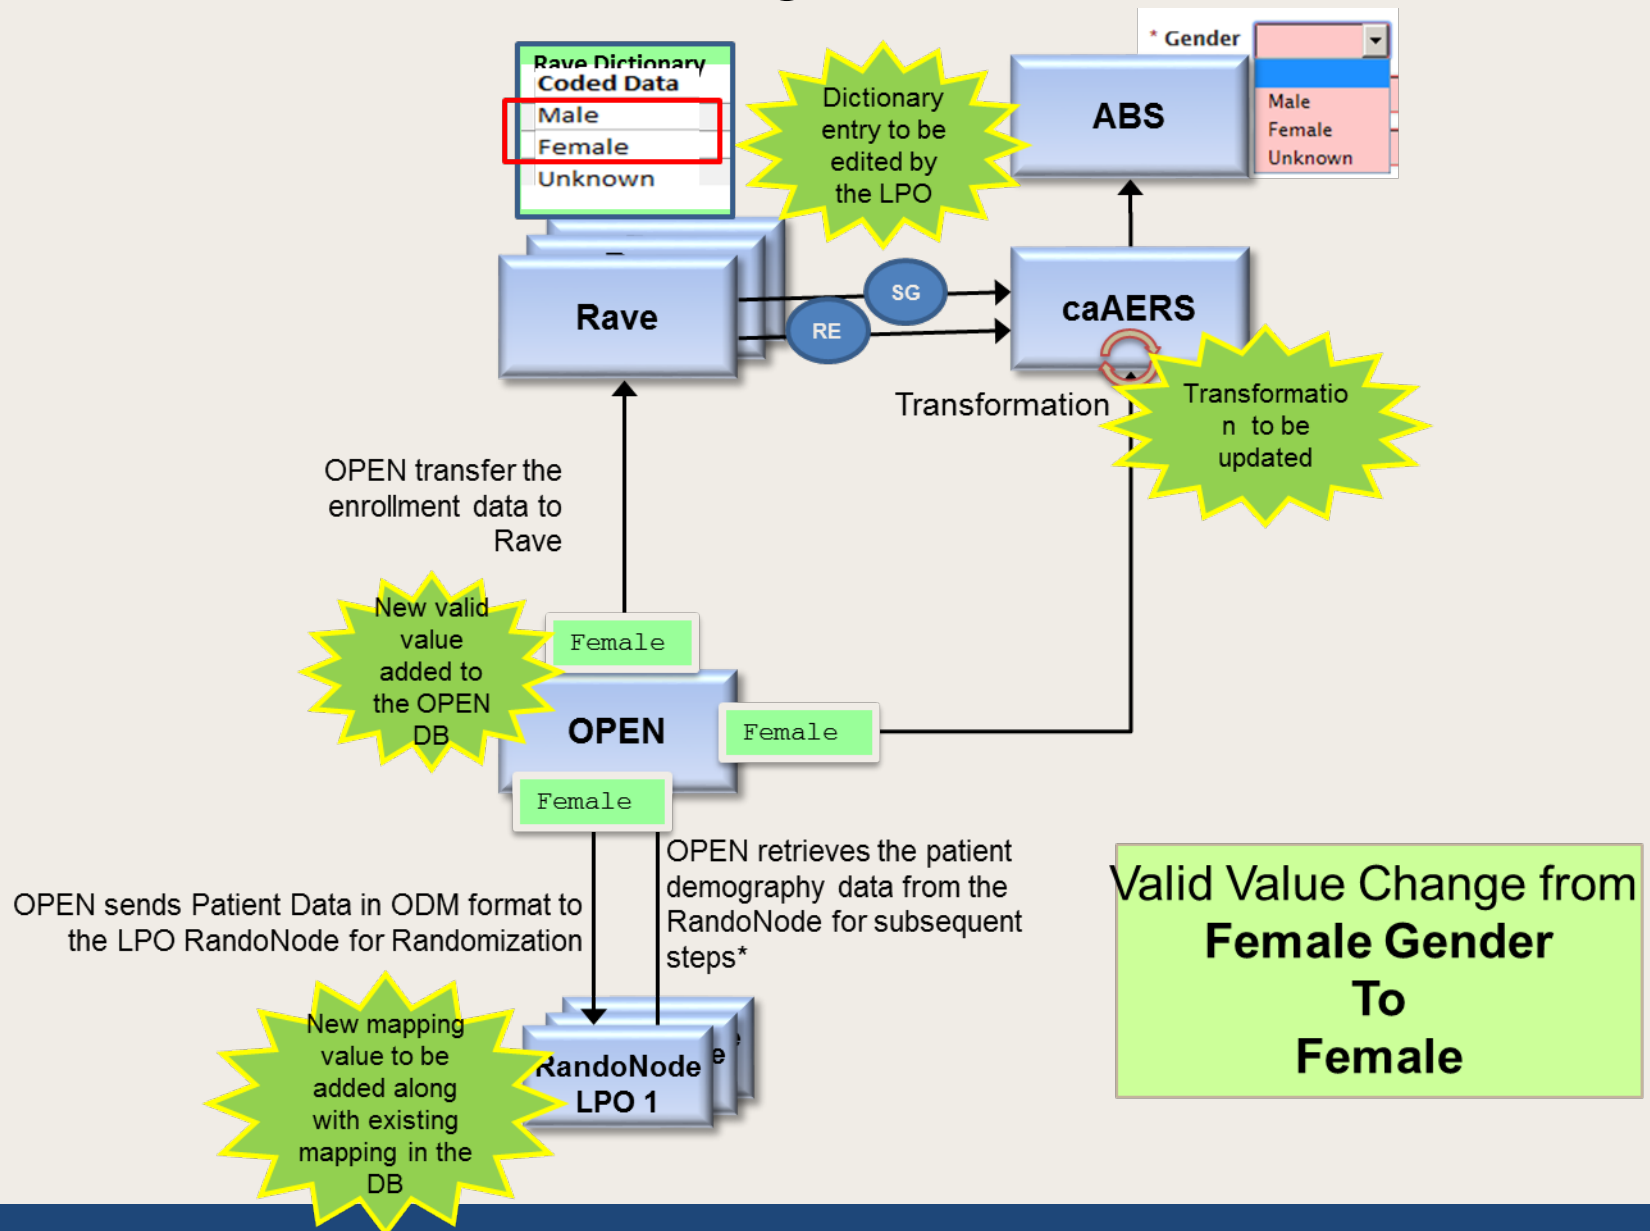

# How CDE Fields are Used in OPEN, RandoNodes and Rave

OPEN		RandoNode (ODM)	Rave	
Field	Example	Example	Field	Example
Public ID	2200604	Used	Used	
Version	2.0	N/A	Used	
NA	NA	N/A	Field Name	Person Gender Text Type PID2200604_V2_0
Short Name	PRSN_GENDER_TXT_TP		FieldOID and VarOID	PRSN_GENDER_TXT_TP
Question Label	Gender of a Person	<ItemData Value="Female Gender" ItemOID="ID. 2200604"/>	Field Label	Gender of a Person
Definition	Text designations that identify gender. Gender is described as the assemblage of properties....		Help Text	Text designations that identify gender. Gender is described as the assemblage of properties....

# Overview of Existing Data flow

# What is Needed to Change a CDE

# Number of CDEs in Use

System	Form	Number of CDEs
OPEN	Uniform Demography Form	11
OPEN	Study Specific Eligibility Checklist Form	Varies with studies
Rave	Uniform OPEN-Rave Forms	29 (v4.0) 37 (v5.0) <small>(Additional CDEs are due to Admin data)</small>
Rave	SAE Integration Forms	28 (v RE-1) 154 (full release) <small>(In general impact is limited to the AE collection datapoints which is limited to 28 datapoints – RE-1)</small>
Rave	Study CRFs	Varies with study

# Recommendations and Best Practices for Changing CDEs Involved in OPEN-Rave-RandoNode and SAE Integration

# General Recommendations

- CDE changes can impact multiple connected systems
- To maintain the data integrity of data already collected, it is appropriate to make changes only on new studies
- To reduce development and testing efforts
  - Limit the number of changes
  - Bundle all changes together so that efforts can be combined
  - Standardization of changes across LPOs are required when making changes on the forms which are used in any integration

# Steps for making changes in Rave

- Recommend the use of a new ALS versions containing forms/data points updated
  - New studies will use the new version of the ALS while existing studies remain without any change
- Custom functions and edit checks that evaluate the valid values affected by the CDE change are to be (modified and) retested
- Data extraction and processing tools (E.g. Those that consume SAS on demand files) may need to be retested for the valid value change

# Changes needed in OPEN

- Will add the new valid values to the OPEN database
- The new valid values will be hidden for the existing studies hence only the old values will be available for selection for the existing studies
- For new studies the new values will be made visible while the old values will be hidden
- Need to test the slot reservation and patient registry implementation

# Changes needed on the RandoNodes

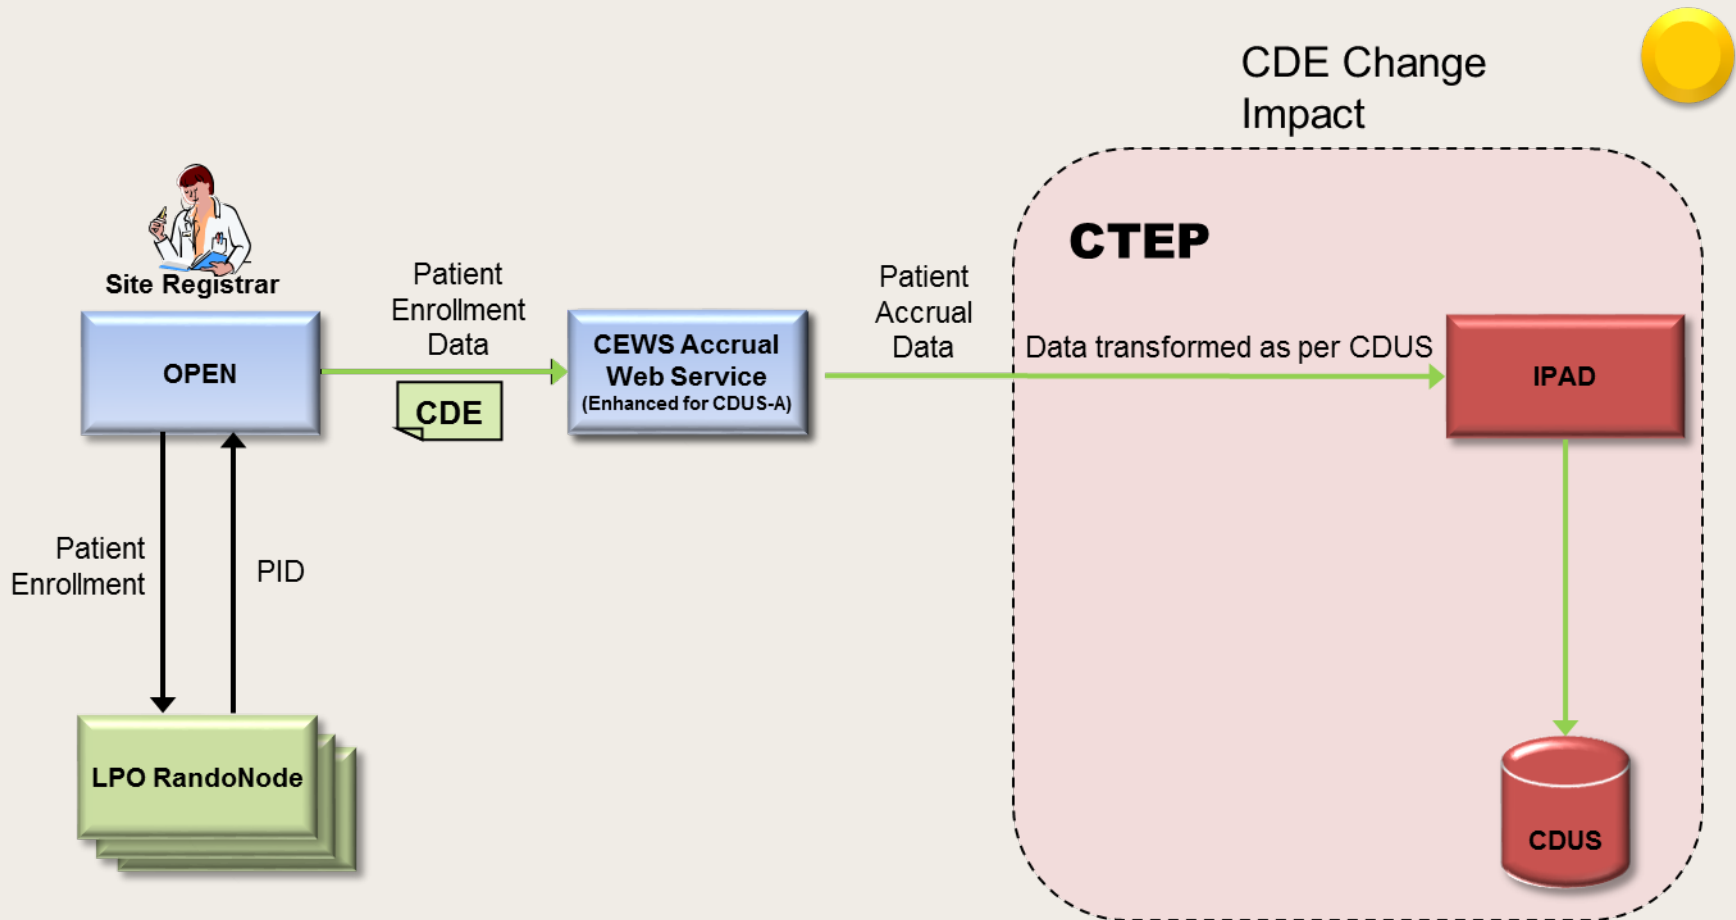

- Add new valid values to the RandoNode database
- Any connected LPO systems consuming the data must be retested to support both old and new valid values
- If the LPO is pushing data to Rave, the data push to Rave is to be retested to handle the new valid values

# Changes needed on caAERS for the SAE Integration

- The transformation logic used in caAERS for mapping the valid values sent by OPEN to match the values in ABS is to be modified and retested
- Any data validations on the changed valid values performed on the user interface layer must be evaluated and retested
