

The Medical Image De-Identification Initiative (MIDI)

Keyvan Farahani, PhD

farahani@nih.gov

Session 8 Panelists

- Fred Prior, PhD - University of Arkansas Medical Sciences
- Ben Kopchick, PhD - Deloitte
- Ying Xiao, PhD - University of Pennsylvania
- David Clunie, MBBS - PixelMed Publishing

MIDI in Context

- Demands for sharing of medical images has grown substantially over the past several years.
- Scalability and automation of image de-identification must be considered
- Furthermore, there's general lack of clarity about what level of de-identification is safe and acceptable.
- What are some possible solutions to scalability and automation?
- What are the guidelines on best practices for image de-identification for public repositories?

The Medical Image De-Identification Initiative (MIDI)

A series of interrelated projects to address the following needs:

- A scalable image de-identification solution, reference datasets
- Guidelines and best practices, and community engagement

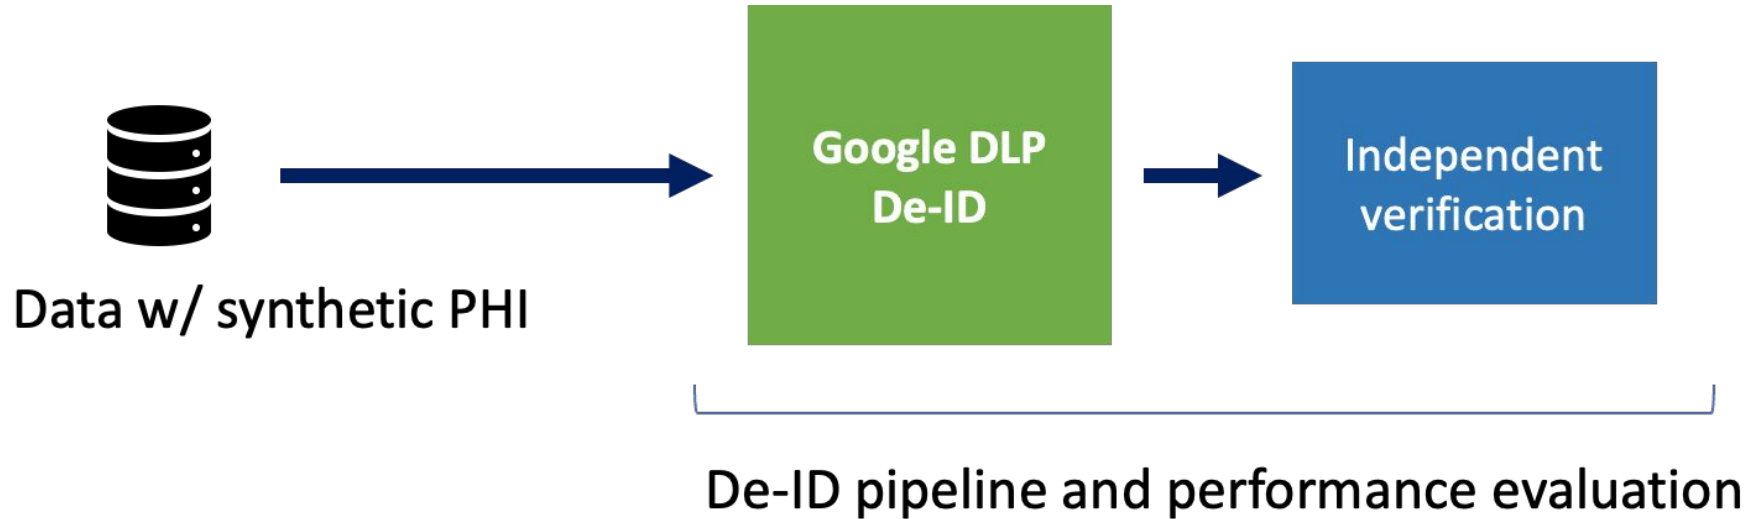

The Medical Image De-Identification Initiative (MIDI)

The MIDI Dataset and Pipeline: Phase 1

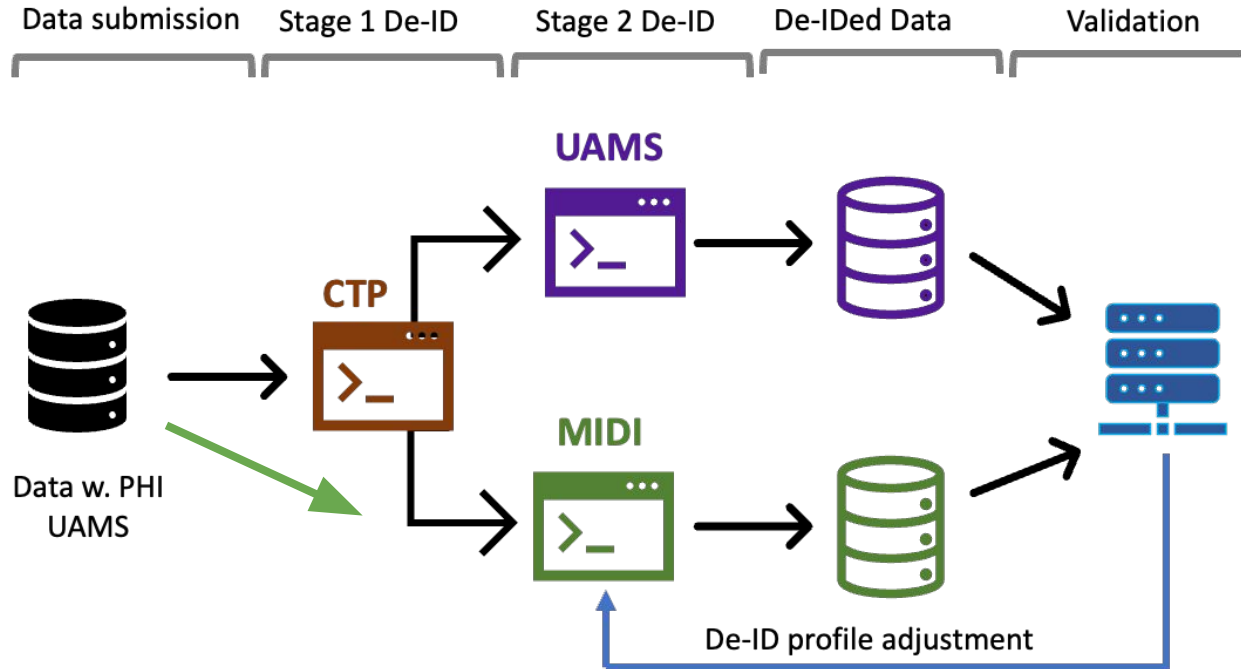

MIDI Pipeline: Phase 2

Kopchick B, et. al., SPIE Medical Imaging 2022
Kopchick B, et. al, AACR Annual Meeting 2023

MIDI Pipeline: Phase 3

MIDI Benchmark Challenge

An opportunity to benchmark the performance of image deID tools against a diverse multi-site, multi-modality, reference dataset.

MICCAI 2024
Oct 6-10
Marrakesh, Morocco
