OWL Mapping - Protégé (New)

| OWL Element | LexGrid | Comments |
| :---: | :---: | :---: |
| OWL: RDF Schema Features |  |  |
| owl:ontology | codingScheme |  |
| xml:lang | codingScheme.defaultLanguage | Default is 'en' |
| dc:title | codingScheme.formalName |  |
| rdfs:label | codingScheme.localName |  |
| URI | codingScheme.registeredName |  |
| owl:versionlnfo | codingScheme.representsVersion | Default is 'UNASSIGNED' |
| dc:rights | codingScheme.copyright |  |
|  |  |  |
| owl:Class (Thing, Nothing) | concept |  |
| rdf:ID | concept.conceptCode |  |
|  | concept.isActive | Hard coded as "Active" |
|  | concept.isAnonymous |  |
| rsfs:label | concept.entityDescription |  |
| rdf:comment | concept.comment |  |
|  |  |  |
| rdfs:subClassOf | association |  |
|  | association.id = "subClassOf" |  |
|  | association.forwardName = "subClassOf" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="false" |  |
|  | association.isTransitive="true" |  |
| rdf:Property (ObjectProperty) | association | An association between two classes (hasDomain, hasRange) |
|  |  |  |
| rdf:Property (DatatypeProperty) | association concept.conceptProperty | An association between one class (domain) and one asscoication (hasDomain and hasDataProperty). <br> The conceptProperty defines the range. |
|  |  |  |
| rdfs:subPropertyOf | association |  |
|  | association.id = "subPropertyOf" |  |
|  | association.forwardName = "subPropertyOf" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="false" |  |
|  | association.isTransitive="true" |  |
|  |  |  |
| rdfs:domain | association |  |
|  | association.id = "hasDomain" |  |
|  | association.forwardName = "hasDomain" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="false" |  |
|  | association.isSymmetric="false" |  |
|  | association.isTransitive="true" |  |
|  |  |  |
| rdfs:range | association |  |

|  | association.id = "hasRange" |  |
| :---: | :---: | :---: |
|  | association.forwardName = "hasRange" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="false" |  |
|  | association.isSymmetric="false" |  |
|  | association.isTransitive="false" |  |
|  |  |  |
| Individual | association | A 'hasInstance' association is created. (ie. sourceld = Country, targetld = America) |
|  | association.id = "hasInstance" |  |
| OWL (In)Equality |  |  |
| owl:equivalentClass | association |  |
|  | association.id = "equivalentClass" |  |
|  | association.forwardName = "equivalentClass" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="true" |  |
|  | association.isTransitive="true" |  |
|  | association.reverseName="equivalentClass" |  |
|  |  |  |
| owl:equivalentProperty | association |  |
|  | association.id = "equivalentProperty" |  |
|  | association.forwardName = "equivalentProperty" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="true" |  |
|  | association.isTransitive="true" |  |
|  | association.reverseName="equivalentProperty" |  |
|  |  |  |
| owl:sameAs | association |  |
|  | association.id = "sameAs" |  |
|  | association.forwardName = "sameAs" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="true" |  |
|  | association.isTransitive="true" |  |
|  | association.reverseName="sameAs" |  |
|  |  |  |
| differentFrom | association |  |
|  | association.id = "differentFrom" |  |
|  | association.forwardName = "differentFrom" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="true" |  |
|  | association.isTransitive="true" |  |
|  | association.reverseName= "differentFrom" |  |
|  |  |  |

|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| :---: | :---: | :---: |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
|  |  |  |
| owl:intersectionOf | concept.entityDescription | String of intersectionOf values (ie. Pizza and not VegetarianPizza) |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "textualPresentation" |
|  | concept.presentation.isPreferred = true | Hardcoded "true" |
|  | concept.presentation.text | String of intersectionOf values (ie. Pizza and not VegetarianPizza) |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
|  |  |  |
| UnionOf | concept.conceptProperty.text = "owl:unionOf" |  |
|  |  |  |
| owl:complementOf | association | association.id = "subClassOf" |
|  |  |  |
| owl:oneOf | concept.entityDescription | String of oneOf values |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "textualPresentation" |
|  | concept.presentation.isPreferred = true | Hardcoded "true" |
|  | concept.presentation.text | String of oneOf values |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
|  |  |  |
| owl:hasValue | associationQualification.nameAndValueList.content |  |
| owl:minCardinality | concept.entityDescription | String of minCardinality Values (ie. (hasTopping min 3) and Pizza) |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "textualPresentation" |
|  | concept.presentation.isPreferred = true | Hardcoded "true" |
|  | concept.presentation.text | String of minCardinality Value (ie. (hasTopping min 3) and Pizza) |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
| owl:maxCardinality | concept.entityDescription | String of maxCardinality Values (ie. (hasTopping max 2) and Pizza) |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "textualPresentation" |

|  | concept.presentation.isPreferred = true | Hardcoded "true" |
| :---: | :---: | :---: |
|  | concept.presentation.text | String of maxCardinality Values (ie. (hasTopping max 2) and Pizza) |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
|  |  | String of cardinality Values |
| owl:cardinality | concept.entityDescription |  |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "textualPresentation" |
|  | concept.presentation.isPreferred = true | Hardcoded "true" |
|  | concept.presentation.text | String of cardinality Values |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  | concept.conceptProperty.propertyName = type | Hardcoded "type" |
|  | concept.conceptProperty.text = "owl:intersectionOf" |  |
|  |  |  |
| owl:disjointWith | association | association.id = "disjointWith" |
| OWL: Annotation Propert |  |  |
| rdfs:label | Presentation |  |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName = "textualPresentation" | Hardcoded "textualPresentation" |
|  | concept.presentation.isPreferred = true | Hardcoded "true" |
|  | concept.presentation.text | Value of rdfs:label |
|  |  |  |
| rdfs:comment | Comment |  |
|  | concept.comment.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.comment.propertyName = "comment" | Hardcoded "comment" |
|  | concept.presentation.text | Value of rdfs:comment |
|  |  |  |
| rdfs:seeAlso | conceptProperty |  |
| rdfs:isDefinedBy | conceptProperty |  |
| OWL: Versioning |  |  |
| owl:versionlnfo | codingScheme.representsVersion |  |
| priorVersion |  | Not Mapped |
| backwardCompatibleWith |  | Not Mapped |
| owl:incompatibleWith | association |  |
|  | association.id = "incompatibleWith" |  |
|  | association.forwardName = "incompatibleWith" |  |
|  | association.isFunctional = "false" |  |
|  | association.isNavigable = "true" |  |
|  | association.isReflexive="true" |  |
|  | association.isSymmetric="true" |  |
|  | association.isTransitive="true" |  |
|  | association.reverseName="incompatibleWith" |  |
| DeprecatedClass | Concept attribute setlsActive = false | Not Mapped |
| DeprecatedProperty |  | Not Mapped |

OWL Mapping - NCI OWL

| OWL Element | LexGrid | Comments |
| :---: | :---: | :---: |
| OWL: RDF Schema Features |  |  |
| owl:ontology | codingScheme | Hardcoded "NCI_Thesaurus" |
| xml:lang | codingScheme.defaultLanguage | Hardcoded "en" |
| dc:title | codingScheme.formalName | Hardcoded "NCl Thesaurus" |
| rdfs:label | codingScheme.localName | Hardcoded "NCI_Thesaurus" |
|  |  | Hardcoded "40010" |
|  |  | Hardcoded "urn:oid:2.16.840.1.113883.3.26.1.1" |
| URI | codingScheme.registeredName | Hardcoded "http://ncicb.nci.nih.gov/xml/owl/EVS/Thesaurus.owl\#" |
| owl:versionlnfo | codingScheme.representsVersion |  |
| dc:rights | codingScheme.copyright | Read from hardcoded "Terms.txt" file . |
| rdfs:comment | codingScheme.entityDescription |  |
|  | codingScheme.isNative | Hardcoded "true" |
|  |  |  |
| owl:Class (Thing, Nothing) | concept |  |
| code | concept.id |  |
|  | concept.isActive | Hard coded as "true" unless class "owl:DeprecatedClass", then 'false' |
|  | concept.isAnonymous |  |
| rsfs:label | concept.entityDescription |  |
| rdf:comment | concept.comment |  |
|  |  |  |
|  | conceptProperty | Indicate whether the concept is primative (has no equavalent classes) |
|  | concept.conceptProperty.propertyName | Hard coded as "primitive" |
|  | concept.conceptProperty.text | "true" |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  |  |  |
|  | presentation | Provide default presentation to match concept entity description if not provided as property |
|  | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
|  | concept.presentation.propertyName | Hardcoded "NCI_Preferred_Term" |
| rdfs:label | concept.presentation.text | concept.entityDescription |
|  |  |  |
|  | conceptProperty | Property with designated concept name label (per NCI requirements and used in codeToName/nameToCode lookup). |
|  | concept.conceptProperty.propertyName | Hard coded as "CONCEPT_NAME" |
| rdfs:label | concept.conceptProperty.text | concept.entityDescription |
|  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  |  |  |

|  | relation | Top-level container for associations (non-inheritable, non-defining relationships between concepts. |
| :---: | :---: | :---: |
|  | relations.dc | Hard coded as "associations" |
|  | relations.isNative | Hard coded as "true" |
|  | relations.entityDescription | Hard coded as "Non-inheritable non-defining relations." |
|  |  |  |
|  | relation | Top-level container for roles (inheritable relationships) |
|  | relations.dc | Hard coded as "roles" |
|  | relations.isNative | Hard coded as "true" |
|  | relations.entityDescription | Hard coded as "Inheritable/defining relations." |
|  |  |  |
| rdfs:subClassOf | association | Association for subtype hierarchy. |
|  | association.id = "hasSubtype" |  |
|  | association.forwardName = "hasSubtype" |  |
|  | association.reverseName = "isA" |  |
|  | association.isNavigable = "true" | Hard coded as "true" |
|  | association.isReflexive="true" | Hard coded as "true" |
|  | association.isSymmetric="false" | Hard coded as "false" |
|  | association.isTransitive="true" | Hard coded as "true" |
|  |  |  |
| hasElement | association | Association used to register component classes as elements of anonymous node representations. |
|  | association.id = "hasElement" |  |
|  | association.forwardName = "hasElement" |  |
|  | association.isNavigable = "true" | Hard coded as "true" |
|  | association.isSymmetric="false" | Hard coded as "false" |
|  | association.isTransitive="true" | Hard coded as "true" |
|  |  |  |
| rdfs:domain | association | Association for role_has_domain relations |
|  | association.id = "Role_Has_Domain" |  |
|  | association.forwardName = "roleHasDomain" |  |
|  | association.reverseName = "kindlsDomainOf" |  |
|  | association.isNavigable = "true" | Hard coded as "true" |
|  | association.isReflexive="false" | Hard coded as "false" |
|  | association.isSymmetric="false" | Hard coded as "false" |
|  | association.isTransitive="true" | Hard coded as "true" |
|  |  |  |
| rdfs:range | association | Association for range relations |
|  | association.id = "Role_Has_Range" |  |
|  | association.forwardName = "roleHasRange" |  |
|  | association.reverseName = "kindlsRangeOf" |  |
|  | association.isNavigable = "true" | Hard coded as "true" |
|  | association.isReflexive="false" | Hard coded as "false" |
|  | association.isSymmetric="false" | Hard coded as "false" |
|  | association.isTransitive="false" | Hard coded as "false" |
|  |  |  |

|  |  |  |
| :---: | :---: | :---: |
|  |  |  |
| rdf:Property (ObjectProperty) | association | An association between two classes (hasDomain, hasRange) |
|  |  |  |
|  |  |  |
| rdfs:subPropertyOf |  | Not Mapped |
|  |  |  |
|  |  |  |
| OWL (In)Equality |  |  |
|  |  |  |
| owl:equivalentClass | association | Association for equivalent class. |
|  | association.id = "equivalentClass" |  |
|  | association.forwardName = "equivalentClass" |  |
|  | association.reverseName = "equivalentClass" |  |
|  | association.isNavigable = "true" | Hard coded as "true" |
|  | association.isReflexive="true" | Hard coded as "true" |
|  | association.isSymmetric="true" | Hard coded as "true" |
|  | association.isTransitive="true" | Hard coded as "true" |
|  |  |  |

| Concepts |  |  |  |  |  |
| MRCONSO.RRF | CODE | Unique Identifier or code for string in source |  | concept.conceptCode |  |
| MRCONSO.RRF | CUI | Unique identifier for concept | x | concept.conceptCode |  |
|  |  |  |  | concept.isActive | Hardcoded in parameter as true. |
|  |  |  |  | concept.conceptStatus | Hard coded as constant in java file as "Active" |
|  |  |  |  | concept.isAnonymous | Hardcoded in parameter as false. |
| MRCONSO.RRF | STR | String |  | concept.entityDescription |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  | concept.conceptProperty.Format | Hard coded as constant in java file as "text/plain" or null |
|  |  |  |  | concept.conceptProperty.propertyName | May be hard coded as constant in java file as one of several properties. |
|  |  |  |  | concept.conceptProperty.usageContext |  |
|  |  |  |  | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.presentation.propertyld | Generated value for property textual presentation using "T" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.comment.propertyld | Generated value for property comment using "C" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.definition.propertyld | Generated value for property definition using "D" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.instruction.propertyld | Generated value for property instruction using "I" concatenated with a steadily incremented numerical value. |
| MRCONSO.RRF | CUI | Unique identifier for concept |  | concept.conceptProperty.text.content. |  |
|  |  |  |  | concept.conceptProperty.propertyld | Generated value for property using "CUI" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.conceptProperty.propertyName | hard coded as constant in java file as "UMLS_CUI" |
|  |  |  |  | concept.conceptProperty.propertyType | hard coded as constant in java file as "property" |
|  |  |  |  | concept.conceptProperty.format | left as null |
| MRSTY.RRF | STY | Semantic type |  | concept.conceptProperty.text.content |  |
|  |  |  |  | concept.conceptProperty.propertyld | Generated value for property using "SemType" concatenated with a steadily incremented numerical value. |
|  |  |  |  | concept.conceptProperty.propertyName | hard coded as constant in java file as "Semantic_Type" |
|  |  |  |  | concept.conceptProperty.propertyType | hard coded as constant in java file as "property" |
|  |  |  |  | concept.conceptProperty.format | Hard coded as constant in java file as "text/plain" |
| MRCONSO.RRF | LAT | Language of Term(s) |  | concept.conceptProperty.language | Logic of code simply selects the first definition in the source as the preferred source |
| MRCONSO.RRF | TS | Term status |  | concept.presentation.isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRCONSO.RRF | STT | String type |  | concept.presentation.isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRCONSO.RRF | ISPREF | Indicates whether AUI is preferred |  | concept.presentation.isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRRANK.RRF | RANK | Termgroup ranking |  | concept.presentation.isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |

|  |  |  |  | concept.presentation.isPreferred | The first presentation for each language is automatically marked as isPreferred="true" after using comparator to sort list of presentations using comparator to evaluate each presentation based on a combination of values from LAT, TS, STT, ISPREF, RANK. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MRDEF.RRF | DEF | Definition |  | concept.definition.text.content |  |
|  |  |  |  | concept.definition.isPreferred | Logic of code simply selects the first definition in the source as the preferred source |
| MRSAT.RRF | ATN | Attribute name |  | concept.conceptProperty.propertyType | Translated to a LexGrid property type. For values AN, CX, HN this property is typed as a "COMMENT" in LexGrid. For value EV this property is typed "PRESENTATION" This only occurs when the STYPE points to the CODE, SCUI or SDUI columns in MRREL.RRF or MRCONSO.RRF. If the STYPE points to SAUI then the values are loaded as property qualifiers. |
| MRSAT.RRF | ATV | Attribute value |  | concept.conceptProperty.propertyValue |  |
| MRSAT.RRF | ATN | Attribute name |  | concept.conceptProperty.propertyQualifier.propertyQualifierld | If the STYPE points to SAUI then the value is loaded as a property qualifier attribute |
| MRSAT.RRF | ATV | Attribute value |  | concept.conceptProperty.propertyQualifier.content | If the STYPE points to SAUI then the value is loaded as a property qualifier attribute |
| MRCONSO.RRF | SAB |  | x | concept.conceptProperty.source.content |  |
|  |  |  | x | concept.conceptProperty.propertyQualifier.propertyQualifierld | hard coded as constant in java file as "source-code" |
| MRCONSO.RRF | CODE |  | x | concept.conceptProperty.propertyQualifier.content |  |
|  |  |  | x | concept.conceptProperty.propertyQualifier.propertyQualifierld | hard coded as constant in java file as "AUI" |
| MRCONSO.RRF | AUI |  | x | concept.conceptProperty.propertyQualifier.content |  |
|  |  |  |  | concept.presentation.representationalForm | When ATN value is EV this presentation will be given a representationalForm of "Abbrev." |
| MRCONSO.RRF | TTY | Term type in source |  | concept.presentation.representationForm | When TTY value is FN then representationalForm is represented as "Full Form" Otherwise the representationalForm is the same as the TTY source (i.e. if TTY is PT then representationalForm is PT.) PT is one of the preferred presentations. |
|  |  |  |  | concept.conceptProperty.propertyQualifier.propertyQualifierld | hard coded as "HCD" |
| MRHIER.RRF | HCD | Source asserted hierarchical number or code for this atom in this context |  | concept.conceptProperty.propertyQualifier.content | This propertyQualifier is present when the HCD is populated in the the MRHIER file. The corresponding code and property for concept or code is qualified as a code or concept with a context derived heirarchy. |
| Relations |  |  |  |  |  |
| MRREL.RRF | CUI1 | Unique identifier for first concept |  |  |  |
| MRREL.RRF | AUI1 | Unique identifier for first atom |  |  |  |
| MRCONSO.RRF | CODE | Unique Identifier or code for string in source |  | ConceptReference.conceptCode (Model element is a ResolvedConceptReference with the value sourceOf attached to the appropriate AssociationList containing this particular REL or RELA association name.) | Mapping to the CODE depends upon the CUI or a combination of CUI and AUI values. If the CODE value is "NOCODE" then LexBIG concatenates "NOCODE" with a "-" and the CUI value. Target or source code value requires use of the DIR flag which indicates the directionality of the relationship in REL or RELA. CUI1 can be used as a pointer to the source CODE value if DIR equals Y , else CUI1 is the targetCode. Similarly, if an AUI exists AUI1 can be an indicator for CODE value to be either or source or target depending on the DIR flag. |
| MRREL.RRF | CUI2 | Unique identifier for second concept |  |  |  |
| MRREL.RRF | AUI2 | Unique identifier for second atom |  |  |  |

| MRCONSO.RRF | CODE | Unique Identifier or code for string in source | ConceptReference.conceptCode (Model element is a ResolvedConceptReference with the value targetOf attached to the appropriate AssociationList containing this particular REL or RELA association name.) | Mapping to the CODE depends upon the CUI or a combination of CUI and AUI values. If the CODE value is "NOCODE" then LexBIG concatenates "NOCODE" with a "-" and the CUI value. Target or source code value requires use of the DIR flag which indicates the directionality of the relationship in REL or RELA. CUI2 can be used as a pointer to the source CODE value if DIR equals Y , else CUI1 is the targetCode. Similarly, if an AUI exists AUI2 can be an indicator for CODE value to be either or source or target depending on the DIR flag. |
| :---: | :---: | :---: | :---: | :---: |
| MRREL.RRF | DIR | Source asserted directionality flag |  | The UMLS directional flag. Y indicates that this is the direction of the RELA relationship in its source; N indicates that it is not; otherwise indicates that it is not important or has not yet been determined. (If blank RELA, we interpret as ' N ', based on empirical review of meta files). |
| MRREL.RRF | RELA | Relationship attribute | association.id (id inherited from Entity) | Source defined associations. If RELA value is "inverse_isa" then it is changed to "hasSubtype." All others mapped as defined in source. |
| MRREL.RRF | REL | Relationship | association.id (id inherited from Entity) | UMLS defined associations |
|  |  |  |  |  |
| MRSAT.RRF | METAUI | Metathesaurus asserted unique identifier |  | Presence of RUI in MRSAT.RRF METAUI column indicates the association defined in MRREL has an association qualifier. Currently only MedDRA uses these. |
| MRSAT.RRF | ATN |  | AssociatedConcept.nameAndValueList.name |  |
| MRSAT.RRF | ATV |  | AssociationQualification.nameAndValueList.content |  |
|  |  |  | AssociatedConcept.nameAndValueList.name | qualifier name is hard coded to "HCD" This association qualifier is attached to an association when the HCD field in MRHIER.RRF is populated. Associations are identified by evaluating a structured series of AUI's that describe the path to root (PTR field in MRHIER) Once these associations are identified they have and association qualifier attached to them with the value of the HCD loaded as the qualifier. |
| MRHIER.RRF | HCD |  | AssociationQualification.nameAndValueList.content |  |
| MRSAB.RRF | SSN | Source short name | association.codingSchemeld (Inherited from Entity) |  |
| MRREL.RR | REL or RELA | Relationship or Relationship attribute | association.forwardName | unqualified REL or RELA value (inverse_isa remains the same) |
| MRDOC.RRF | EXPL | Detailed explanation | association.reverseName | Where DOCKEY in MRDOC equals REL or RELA and value is the association name and TYPE is REL or RELA name prepended to " inverse". |
|  |  |  | association.inverse | Hard coded as a blank string. |
|  |  |  | association.isAntiReflexive | hard coded to null. |
|  |  |  | association.isAntiSymmetric | hard coded to null. |
|  |  |  | association.isAntiTransitive | hard coded to null. |
|  |  |  | association.isAntiTransitive | hard coded to null. |
|  |  |  | association.isNavigable | hard coded as Boolean with value true. |
|  |  |  | association.isReflexive | hard coded to null. |
|  |  |  | association.isReverseFunctional | hard coded to null. |
|  |  |  | association.isSymmetric | hard coded to null. |
| MRREL.RRF | SAB, REL, RELA | Source abbreviation | association.isTransitive | True when the name of the association can be mapped to a source defined in the SAB attribute of MRREL.RRF. Not the SAB value itself, but extrapolated from it using SAB to REL, RELA relationship. |
|  |  |  | association.isTranslationAssociation | hard coded to null. |
|  |  |  | association.targetCodingScheme | hard coded to null. |
|  |  |  | association.entityDescription.content (inheritance path for entityDescription is Entity->versionableAndDescribable) | Hard coded to: "UMLS-defined relationships" |

## SNOMED UMLS Mapping

| RRF File Name | RRF Column Name | RRF Definition | LexGrid Model Element | comments |
| :--- | :--- | :--- | :--- | :--- |
| RSAB.RRF | SVER | Release date or version number of a <br> source | codingScheme.representsVersion |  |
| RSAB.RRF | SSN | Source short name | codingScheme.codingScheme? |  |
| RSAB.RRF | SON | Source Official Name | codingScheme.formalName |  |
| MRSAT.RRF | ATV |  | codingScheme.defaultLanguage |  |

OBO Mapping

| OBO Class | OBO Entity | LexGrid Model Element | Notes |
| :---: | :---: | :---: | :---: |
| Document Header | format-version |  | Not mapped. |
| Document Header | data-version | CodingScheme.representsVersion | Creates a codingSchemeVersion and SystemRelease record. If not specified, then hard coded "UNASSIGNED" |
| Document Header | version | CodingScheme.representsVersion | Deprecated - use data-version if present. |
| Document Header | date |  | Not mapped. |
| Document Header | saved-by |  | Ignored but included if contained in the remark entity. |
| Document Header | auto-generated-by |  | Ignored but included if contained in the remark entity. |
| Document Header | subsetdef |  | Not mapped. |
| Document Header | import |  | Deprecated - Imports are used to assemble a larger document from smaller. |
| Document Header | typeref |  | Deprecated. |
| Document Header | synonymtypedef |  | Not mapped. |
| Document Header | idspace |  | Not mapped.The idspace is a triple - localName, URN and description. |
| Document Header | default-relationship-id-prefix |  | Not mapped. |
| Document Header | id-mapping | CodingScheme.supportedAssociation | This is more generalized than the LexGrid model, as it supports mapping between *any* id's. Note that its primary purpose, however, is to handle supportedAssociation. |
| Document Header | remark | CodingScheme.entityDescription | Will combine multiple remark entities into the entityDescription. |
| Document Header | default-namespace | codingScheme.codingScheme | Will use default-namespace if provided; otherwise will use filename without the extension. |
| Document Header | default-namespace | codingScheme.formalName | Will use default-namespace if provided; otherwise will use filename without the extension. |
| Document Header | default-namespace | codingScheme.registeredName | Combination of "urn:Isid:bioontology.org:" and if provided, the value in "default-namespace"; but if not will use filename without the extension. |
|  |  | codingScheme.defaultLanguage | Hardcoded "en" |
|  |  | codingScheme.isNative | Hardcoded "true" |
| Stanza | id | CodedEntry.conceptCode |  |
| Stanza | name | CodedEntry.entityDescription |  |
|  |  | CodedEntry.presentation['textualPresentation'].text |  |
|  |  | CodedEntry.presentation['textualPresentation'].isPreferred = true |  |
