

caDSR Bug Tracker Fields

Content

- [Introduction](#)
- [Fields](#)

Introduction

This page details the fields defined in the caDSR projects:

- Admin Tool
- caDSR Database
- CDE Browser
- CDE Curation
- Form Builder
- Freestyle Search
- Sentinel
- SIW
- UML Model Browser

Refer to the Description column for information on how to complete the field.

Fields

A blank under Project means it appears in All projects named above.

Project	Field	Description
	artifact_id	Populated by GForge
	summary	Use active voice, state the bug or feature, keep it brief
	open_date	Populated by GForge
	status_name	Populated by GForge
	priority	Defaults to 3, do not change the default without adding an appropriate comment in the description, this indicates the importance assigned by project management for development tasking and is not necessarily related to Severity (see below)
	assigned_to_name	Upon creation default to None, will be set by Project Management after reviewing content
	submitter_name	Populated by GForge, anonymous submissions are not permitted
	last_modified_date	Populated by GForge
	Assigned Release	Defaults to None, do not change until reviewed by Project Management and included in the scope of a release, this reflects the release which contains the artifact change
	Environment /Tier	The NCICB Tier on which the tracker was observed, i.e. DEV, QA, Stage, Production and Sandbox
	URL	Provides a link to supporting documentation, e.g. Design specification, Detailed Requirements, etc, which will be stored in the project Docs tab or on a Wiki page
	Resolution	Indicates how the tracker was resolved, e.g. code change, etc.

	Include in Known Issues?	Use to flag an Open issue to be included in the product Release Notes known issues section until such time as the Assigned Release is set and the fix deployed to Production
	Version Found	The product Release Version in which the symptom was found, should be the earliest possible Release in which the bug can be recreated, e.g. an error found during QA for 4.0 will be investigated by a developer and if the error can be recreated on Stage and/or Production the Version Found is changed from 4.0 to 3.2
	Severity	An indication of how this impacts the user in the completion of normal business tasks, it is not necessarily related to Priority (see above)
	Help Desk Reference #	When the tracker is a result of a Help Desk ticket, record the ticket number
	Disposition	The current disposition of the tracker, e.g. coded, in testing, etc.
	Component	For products with multiple identifiable feature components, select the appropriate specific component, e.g. DE Edit in the Curation Tool
	Requestor	The name or email address of the person requesting the tracker, which may or may not be someone with a GForge account, is used as the point of contact (POC) to gather more information about the tracker symptoms, etc
	Browser	The internet browser used when the bug occurred and/or on which the bug was successfully recreated
Admin, Database, Browser, Form, SIW, UML	Development Status	Believe this is redundant with Disposition and should be removed
Database, Freestyle, Sentinel, Curation, Form, SIW, UML	Product	Believe this is redundant with Component and should be removed
Freestyle, Sentinel, Curation	Scope Category	A general category for the type of tracker, e.g. usability, performance, etc
Sentinel, Curation	Type	A detailed breakdown of the type of bug, includes Cosmetic, Data Integrity, Unexpected Results, etc
SIW	Mode	Believe this is redundant with Component and should be removed
