## Current Release

2.1 (Internal Release)

## Tool Overview

The NCI EVS Report Writer is a web-based tool that allows users to generate reports from a specified data source and download/print these reports to a specified file type or format (for example, Excel, tab-delimited) This tool allows for the generation of standard reports (with predefined criteria and outputs) and custom reports where the user must provide the tool with the required search criteria and desired output data.

Currently the Report Writer is only available internally but there are future plans to deploy to the production environment where it will be made available to external users.

## Installation and Downloads

- No download; internal release.
