

caDSR Hosted Data Standards, Downloads, and Transformation Utilities

[caDSR Wiki](#) | [caDSR Database and Tools](#) | [caDSR Documentation](#)

The [NCI caDSR CDE Browser](#) can be used to download collections of metadata describing data held in repositories for cancer research and clinical trials. There are currently no NCI Recommended CDEs for use other than the CDEs marked as having a Registration Status of "Standard". Any CDE in caDSR can be reused, but the ones marked "Standard" have been through a broader governance process. There communities within NCI who have agreed to use a set of CDEs for specific purposes, for example EDRN, TCGA, NCTN, and many others. If you wish to collect data that is compatible with a specific group, you should begin by looking for the group's CDEs using the CDE Browser. The Context name is an organizing principle for tree based navigation, and the "Advanced Search" provides a way to search for CDEs grouped by Classifications, or keywords.

Best Practices for creating CDEs can be found [here](#).

The [caDSR Form Builder](#) can be used to create, view and download the Case Report Forms (CRFs) designs. Each question on a caDSR Form is generally backed by a caDSR CDE, though we do have some forms that were bulk loaded without CDEs. When a CDE is associated with a form it is visible in the Form Builder web application, and is present in the XML or Excel download. Since each CDE has been annotated with semantic concepts for the question and each valid value, you can use this information to compare data that may be represented differently, or to explore deeper meaning by traversing to the NCI Thesaurus for synonyms, related concepts, and other semantic information about each concept. The concept information for each valid value is not in the XML or Excel download, but we can produce a **CRF Data Dictionary** which will contain the concepts for each question and valid value for any associated CDE. Please send the CRF public ID and version number to the [NCI App Support desk](#) and ask that the caDSR team help you with this request.

Help Downloading Files

For help accessing PDF, audio, video, and compressed files on this wiki, go to [Help Downloading Files](#).

Currently, CDEs can be downloaded to Excel or XML Format. CRFs can be downloaded to Excel format.

Downloading Production CDEs

See [Community Released Downloads](#) to download production CDEs to Excel and XML format and download DTDs from Github.

Attempting to download **all the caDSR CDEs** would result in a **file size that is too large for a single MS Excel download**, and currently forms can only be downloaded **one form at a time**.

Therefore, "canned", or pre-downloaded collections of all the NCI "Released" CDEs, and CDEs by selected individual projects is provided for your convenience. The NCI Preferred Standards have become too large to download in a single file, so they can be extracted from the "Released" CDE files.

Note that NCI added an [FTP site](#) where all "Released" CDEs as XML.

Table of Contents

- [Download caDSR Community Released CDEs](#)

Download caDSR Community Released CDEs

- For current list of all NCI Standards since the date of this download, visit the [NCI caDSR CDE Browser](#) and select "Search", or enter search criteria to filter the results.
- All non-retired production CDEs (CDEs with *Workflow status NOT = "RETIRED..."*) as of July 1 2022.
 - [caDSR Production CDEs in Excel](#)
 - [caDSR Production CDEs in XML](#)
 - [Download CDE Browser DTDs](#)

Downloading DTDs

The [Download CDE Browser DTDs](#) link opens Github and displays a list of DTD files by CDE Browser version. For the most current version, use 5.3.4. Previous versions, 3.0, 3.0.1, 4.0, 5.0 are also available.

REDCap CDE and CRF Transformation Utilities - REDx

- These are XSLT files that transform caDSR CDEs and Forms in XML format to a REDCap Data Dictionary:
- The transformation utility converts a single or multiple Form represented in XML to REDCap compatible csv format
 - for CDE XML, the file may contain multiple CDEs
 - for CRF XML, the file can contain one or more form per transform, please select the correct version of the utility below
- [REDxCDEv5](#)
 - Transformation utility to convert caDSR CDE Browser 4.0.5 XML download format into REDCap Data Dictionary as of 2016/10/02
 - Version 5 - 2016-10-27: Change transform to pull Min/Max Value instead of Min/Max Length
 - Version 4 - 2016-10-02: Add CDE ID/Version as "Field Annotation". Export Valid Values in the same format as exported for CRFs, ensuring that CDE values/choices will be consistent for the same CDE used across studies, whether as a CRFs, or imported as a list of CDEs.
 - Version 3 - 2015-08-05: Change *field note* to contain the CDE Question Text, the field does not need to be lower-case without spaces, that rule applies only to *variable name*
 - Version 2.1 - 2015-6-18: Add instruction for customizing Form name, Id and Version
 - Version 2.0 - 2015-6-10: Add a check for existing CDE PV Values. If already a numeric, use existing value. If not, generate a unique value based on the position in the value list.
- [REDxCRFV10](#)
 - Transformation utility to convert a single caDSR Form Builder 4.0.3.1 formCart Version 1 XML format (retrieved from Objcart API) into REDCap Data Dictionary
 - Version 10 - 2016-10-02 - This is the version used to convert all Standard NCI CRF Templates into REDCap for their Shared Library.
 - Version 6-9 Not released
 - Version 5 - 2015-07-29: Add a check for existing CDE PV Values. If PV Value is already a numeric, use existing value. If not, generate unique value based on the position of the PV in the value list.
 - Version 4 - 2014-11-10:
 - Change generation of Field Label to the original caDSR Preferred Question Text, without converting it to lower case and replacing spaces with underscores
 - See Version comments within the xslt for prior version release notes

Current NCI Standard CRFs

The NCI develops and publishes standard CRF templates for use in creating new clinical trials protocol forms. Each CRFs consists of CDEs organized into 3 sections: mandatory, optional, and conditional CDEs. To retrieve these and any other forms registered in caDSR since the dates listed below, please visit the [caDSR Form Builder](#), where a Guest account and password are provided for your convenience.

There are currently over 70 Standard CRFs released for production use.

There are 60 CRFs that have been converted to REDCap format and can be found in the Shared Library, and in the zip file attached here.

CDEs Initiatives

CDEs initiatives are owned by individual NCI Divisions, Offices, and Centers, as well as by NCI stakeholder communities who have chosen to use NCI caDSR as a central repository for their CDEs. The CDEs are organized in the caDSR CDE Browser based on Context and Classification Scheme. Contexts represent a community who have agreed to share CDEs and CRFs, within a Context end users create **Classification Schemes** within caDSR for various projects in their community, and use them to classify and organize CDEs. The classifications are a list of keywords and categories familiar to the community. Opening up a *Context* in the CDE Browser will reveal a "*Classifications*" node, that when opened will list all the projects in alphabetical order. Clicking on a project node will return a list of all the CDEs for that project.

For prior downloaded versions of these collections, see the **Attachments** listed at the end of this page. The date of the download is listed as the "as-of" date for each collection of CDEs.

If importing caDSR content from a download into another ISO/IEC 11179 or other similar CDE or CRF metadata registry, please add the caDSR Registration Authority Identifier (RAI) 2.16.840.1.113883.3.26.2 to the metadata to keep the caDSR content distinct from the local repository. Per ISO/IEC 11179, the RAI is part of a globally unique identifier known as the IRID (Item Registry Identifier), and uniquely identifies registry content as being related to particular registrars. The IRID for all caDSR content is the <caDSR OID + Item public Id + item version>. For example, if the caDSR item public id = 2181292, version = 1.1, when importing you would add the RAI, and the result would be an IRID = 2.16.840.1.113883.3.26.2 + 2181292 + 1.1.

TCGA Phase II meta data elements (CDEs)

TCGA (The Cancer Genome Atlas) is a project funded by the National Cancer Institute (NCI) and National Human

Genome Research Institute (NHGRI). A project overview can be found on the [TCGA Home Page](#).

TCGA provides data element descriptions for the clinical data elements found in the TCGA data files. The BCR on-line data dictionary displaying the essentials of the clinical CDEs as an HTML page is located [here](#). The files below contain all the caDSR metadata for these CDEs. The HTML data dictionary was generated from the XML download of the TCGA CDEs. For more information or help creating your own HTML Data Dictionary from NCI registered CDEs, please contact the NCI Help Desk.

They are also available from the [CDE Browser](#) in the **caBIG** Context under the Classifications tab heading "**TCGA 2.6 by Disease**". New TCGA CDEs not yet in the BCR data dictionary can be found under the caBIG Classification "**The Cancer Genome Atlas**", sub-heading "**New TCGA Data Elements**".

- [TCGA Phase II CDEs in Excel](#) - as of Oct. 19, 2011
- [TCGA Phase II CDEs in XML](#) - as of Oct. 19, 2011

Biomedical Research Integrated Domain Group (BRIDG) meta data elements (CDEs)

BRIDG is a model that was created by a collaborative effort engaging stakeholders from the Clinical Data Interchange Standards Consortium (CDISC), the HL7 BRIDG Work Group, the US National Cancer Institute (NCI), and the US Food and Drug Administration (FDA). A logical information model was developed to describe basic, pre-clinical, clinical, and translational research. Please visit the BRIDG website for more information.

The CDEs in the BRIDG model are available from the [CDE Browser](#) in the **BRIDG** Context under the Classifications heading "[Link to BRIDG 3.2](#)", subheading "**BRIDG 3.2**". They have been downloaded and made available here for convenience.

- [BRIDG 3.2 in Excel](#) - as of Aug. 11, 2015
- [BRIDG 3.2 in XML](#) - as of Aug. 11, 2015

BRIDG 3.0.2 is also available in the Attachments section of this page and in the CDE Browser.

North American Central Cancer Registries (NAACCR) meta data elements (CDEs)

NAACCR develops and promotes uniform data standards for cancer registration, and aggregates and publishes data from central cancer registries.

It promotes the use of cancer surveillance data and systems for cancer control and epidemiological research. See their website for more information about [NAACCR](#).

NCI has registered several versions of the NAACCR data elements as CDE metadata in caDSR for discovery and use by those wishing to utilize the NAACCR data, or create data repositories of compatible data.

The following versions of NAACCR have been recorded in caDSR, are available from the [CDE Browser](#) in the **PS&CC** Context under the Classifications tab heading "**Division of Cancer Control and Population Sciences**". They have been downloaded and made available here for convenience.

- [NAACCR 11.1 CDEs in Excel](#) - as of Dec 17, 2010
- [NAACCR 11.1 CDEs in XML](#) - as of Dec 17, 2010
- [NAACCR 12.1 CDEs in Excel](#) - as of April 23, 2012
- [NAACCR 12.1 CDEs in XML](#) - as of April 23, 2012

National Biomedical Imaging Archive (NBIA)(formerly NCIA)

The CDEs in the HINTS 2005 survey are available from the [CDE Browser](#) in the **caBIG** Context under the Classifications heading "**NBIA**". They have been downloaded and made available here for convenience.

- [NBIA CDEs in Excel](#) - as of Feb 09, 2011
- [NBIA CDEs in XML](#) - as of Feb 09, 2011

Surveillance, Epidemiology and End Results (SEER) meta data elements (CDEs)

The SEER program works to provide information on cancer statistics in an effort to reduce the burden of cancer among the U.S. population. The data elements collected in cancer surveillance have been registered in the NCI caDSR, and are available from the [CDE Browser](#) in the **PS&CC** Context under the Classifications tab heading "**caSEER**", subheading "**com.imsweb.caseer**". They have been downloaded and made available here for convenience.

- [SEER CDEs in Excel](#) - as of Dec 23, 2010
- [SEER CDEs in XML](#) - as of Dec 23, 2010

Health Information National Trends Survey (HINTS2005)

The CDEs in the HINTS 2005 survey are available from the [CDE Browser](#) in the **PS&CC** Context under the Classifications heading "**HINTS2005**". They have been downloaded and made available here for convenience.

- [HINTS 2005 CDEs in Excel](#) - as of April 04, 2012
- [HINTS 2005 CDEs in XML](#) - as of April 04, 2012

Electronic Medical Records and Genomics (eMerge) Network CDEs

The CDEs in the [eMerge](#) project are available from the [CDE Browser](#) in the **caBIG** Context under the Classifications heading "**eMerge Data Variables**". They have been downloaded and made available here for convenience.

- [eMerge CDEs in Excel](#) - as of August 05, 2015
- [eMerge CDEs in XML](#) - as of August 05, 2015
