

NCI Protege 5 Project Configuration

Overview

The configuration files for the Protege server are kept in a folder called "protegedata/configdata". The scripts to start and stop the Protege services are located in the scripts directory and directly reference the configuration file location using the full path of "/local/content/protege/protegedata/configdata/<file>". Some files and scripts are tier specific while others are not.

Tier Specific files:

- protegedata/configdata/protege-server.jks
- protegedata/configdata/server-configuration.json
- protegedata/configdata/server.properties
- scripts/shutdown.sh
- scripts/run-background.sh - only if protege-server.jks password varies
