LexEVS 6.4.1 CTS2 Overview of Changes

LexEVS 6.4.1 CTS2 release consisted of the following changes:

- [Property Qualifier Support](#)
- [Default URI Resolver is NCI's production URI Resolver](#)
- [Parameterize the URI Resolver service URL](#)

Property Qualifier Support

Property Qualifiers (property to property relationships) are now being returned by the CTS2 RESTful service in XML and JSON formats.

- [LEXEVSCTS2-35](#)

Example Call

```
http://<base url>/codesystem/NCI_Thesaurus/version/14.05d/entity/C12435?format=json
```

Default URI Resolver

The default URI Resolver that CTS2 points to is now an internal URI Resolver at NCI. This removed the dependency on an external URI Resolver being active.

Parameterize the URI Resolver service URL

Allow the end user to specify the URL of the URI Resolver service in a property file rather than hard coded in code.
