LexEVS 6.1 Proposal - Value Sets - VS.1

Part of document:

Enhancement

Ability to add metadata to value set definitions

- Assumption: This is similar to the process of adding metadata to the coding scheme.
- Update: Current format fine. Need to make sure cleanup occurs.

Tasks to Complete

- Design & implement a new metadata loader (or use existing if the same format is acceptable)
- If new loader is required, need new metadata API
- Modify code to allow attaching metadata to the value set.
- Create a query to search value set metadata.
- Make sure metadata gets cleaned up on removal of a value set
- Update value set GUI to support metadata

Estimated Effort

- W/new loader: 2 months/1 FTE
- W/O new loader: 2 weeks/1 FTE
