

caArray Demo Testing Data

To test your caArray application with sample data, please download the sample design file and the sample experiment data file below. The [Step-by-Step Guide for Sample Data Loading and Testing](#) will guide you through the data loading and the experiment creation process. The instructions will also show you how to validate whether your data is shared with other users on the caGrid.

- [Sample Array Design Data: Hu6800.zip](#)
- [Sample Experiment Data: CaArray_golub-00095_files.zip](#)
- [A Step-by-Step Guide for Sample Data Loading and Testing](#)

Notes about the demo testing data

- The Sample data works with caArray 2.0.x and above.
- Do not change the name of the design file. The **name** of the **design file** is referenced in the experiment **data** files. Changing the name of the design file will result in the data validation failure.
- To test your caArray installation with additional real data, you can download this data from the caArray community server. For example, you may obtain testing data from experiment [Krahe-00060](#). On this page, click the Data tab. You can download the list of files used in the experiment. To obtain more design files, please follow the instructions provided in FAQ [caArray039](#).
- If you have any questions, please post on the [caArray End User Forum](#). The Knowledge Center staff will be able to help you through the forum.

Thank you for using caArray.
