

LexEVS 6.1 Proposal - Other - O.6

Part of document: [LexEVS 6.1 Proposed Scope Items](#)

Enhancement

Consider conceptual normalization of data structures regardless of loader used (e.g. GO in OBO and GO loaded via Owl should look the same if they are the same content)

- Per the CTS2 specification loaded format is part of the identity of a code system; therefore different formats of the same thing are not necessarily interchangeable. This could potentially take a huge harmonization effort to make these look the same.

Tasks to Complete

- All loaders would have to change.
- Would need harmonization documentation/agreement

Estimated Effort

- If possible to do, 6-9 months?
