caArray 026 - Changing the port number after caArray installation

Question: Can I change the port number after caArray installation?

Topic: caArray Installation and Upgrade

Release: Up to caArray 2.x

Date entered: 2009/07/15

Details about the Question

Am I able to change the default port number 38080 to another port, for example, 80 after the installation of caArray? Do I just change the port number in the install property file and start up the server again?

Answer

The caArray HTTP port number can be changed in the file:

```
<caArray installation home>/jboss-4.0.5.GA/server/default/conf/bindings.xml
```

following the steps below:

1. Shut down the JBoss server.
2. Open the file <caArray installation home>/jboss-4.0.5.GA/server/default/conf/bindings.xml in a text editor.
3. Search and replace all instances of the current port number with the desired port number.
4. Save and restart JBoss.

Re-running your installer is not necessary, since it could remove all the data in the database from current installation.
