

# NBIA 3.7 Release Announcement

Dear NCIA Registered Users,

We are happy to announce release of NCIA version 3.7 at <http://imaging.nci.nih.gov> This release includes a new quick-preview "movie" viewer feature and bug fixes. This new feature is summarized below. As always, support is available from [Application Support](#).

It's now possible to preview a complete image series in a movie viewer in both automatic and manual mode.

- Manually advance slices forward and backward (ex. Sliding bar)
- Automatically advance slices forward and backward
- point and click to any slice (Click on any point of a sliding bar)
- loop through slices (continue to loop forward and then backward until user termination)
- mark first and last slice boundaries for viewing
- scroll to first, last, next, and previous image
