National Cancer Institute Center for Bioinformatics
Protege 1.4.1 Patch Release Notes
26 February 2010

Product Changes

The main objective of this patch release of Protégé 1.4.1 is to provide fixes to performance bugs found after the initial release of NCI Protégé 1.4.1 to production. This patch release maintains acceptable performance levels when the size of the Change Ontology increases to unusually high levels (e.g. after multiple batch loads and batch edits).

New Feature Highlights

No additional features were included as part of this release.

Behavior to be Aware Of

[GF22902](#) - You are able to add roles and individuals even though they are pre-merged. You can still edit premerged concepts.

[GF26478](#) - Cannot add role after editing a parent due to loss of focus in class browser

WORKAROUND:

When you re-select the concept in the "Class Browser" the "Create a Role" dialog will appear as intended and with no error. This is a Workaround for this issue.

List of New Features

GForge number (hyperlinked)	Brief description of item
None	None

List of Bug Fixes

GForge number (hyperlinked)	Brief description of item
23517	ChAO is slow working with over 57000 changes
26154	Performance does not seem to be as robust as it was in UAT
26131	NIH user name is displayed in slot of DEFINITION

Other Items Closed

The defects in the following list were not reproducible, or were fixed as a by-product of refactoring, or were related to configuration setup.

GForge number (hyperlinked)	Brief description of item
None	None

CORE Product Dependencies

No caCORE dependencies. This software is used for editing and maintaining NCI Thesaurus and BiomedGT
