Progress

Immediate Priorities and Problems (Mayo Team)	Scott: MySQL 5.5 update, Stage Crash, Default Sort - MySQL updates - running Junits to confirm upgrade. - There are some junits that are causing issues - one is causing locking of the database. This specific case is against the pre-CTS2 API. - Stage Crash - In the logs, Scott noticed that a user might be using the old caCORE API. After crash - on restart, the server started responding again. - Scott will look at the logs a bit closer from site scope. - Default Sort - Sort is based on scoring algorithm - Nothing needs to be fixed, but need to understand how it is sorted and also how to find other sort algorithms. - From LexBIGService can get a list of the sort extensions. (Scott to send code) - There was an email thread with Kevin (Larry to forward to Scott) Cory: CTS2 Client UI, Java 1.7 - CTS2 Client UI - Feedback received from Sherri and Tracy - Updates made to the UI (note sent yesterday) - IE 11 still has issues with client rendering. (create JIRA) - Update header so that service details in gray area and the search is below gray area on the left (possibly centered). - Java 1.7 - Version 1.7 update 55 - Version 1.7 update 45 - is current at NCI - Only requirement is Java 1.7, so the update 55 is okay unless there are NCI guidelines (none currentl) Craig: Project Plan Updates - Add OWL2 loader Jira items. - Update ARC document with dates as they correlate to Tech Stack updates complete.		
caDSR and Value Set and other URIs (Weekly Status)	- Denise and Sherri to get a demo set up in June – Harold to be included. - No updates.		
UMLS Mapping Files	- Alameda group is already reviewing the data for Tracy. 2 different maps are causing the issue. - Not seen as a source issue. - JIRA item to query on the URI (true identifier) was created by Tracy. - Would like to have the manifest be used (currently it does not) - needs to be a feature request. Scott to create Jira item.		

ARC	- Update from Larry - progress being made - Eric and others understand what is being requested. - Considering an 800GB drive. - Need to look at where logs could be stored. If on SSD, it would cause additional read/writes. - Noted slow load time over network for MySQL 5.5 (Scott) - Something to keep in mind as we move forward. - Loading to happen local to the DB would be optimal, but may not be practical in the environment. - Clarify ARC Deployment Tasks - Craig and Scott to update the ARC dates.		
Value Set Viewer Item prioritization	- Ran out of time for discussion. - Craig to send list of JIRA items for the team to review.		
MetaBrowser issue (Kim)	resolved		
Stage Crashes	see above		
Value Set Resolution issue CTS2 JIRA #21	- Reported by Sherri that value set wasn't resolving correctly. - Discovered that previous issue (truncating value set names to 50 chars) is causing this issue in the CTS2 Services. We aren't resolving to the shortened version of the name.
