Progress

Immediate Priorities and Problems (Mayo Team)	<p>Scott: Loader testing against, Working on JIRA #598</p> <ul style="list-style-type: none"> Jira 598 - fix complete. <p>Cory: Working JIRA #'s 531, 371</p> <p>Craig: Project Plan Updates.</p>		
caDSR and Value Set and other URIs (Weekly Status)	Production now reflects updated URI's Need to know if URI resolver is case sensitive (Scott). URL's are not by definition case sensitive. In general you cannot say you can use either. Proposal: Should go to all lower case.		
Dev DRT request	<ul style="list-style-type: none"> Ssh is now being implemented on Shady Grove dev. Dev and QA to be combined via new Agile approach. QA and developer sit together to develop the test. Once done on Dev, QA is done. Perhaps sprint testing will be done on Dev. This will save data migration. Potential for conflict with data and application testing taking place on the same server. Need to have a plan as to how we will test to potentially take to Systems. Requirements for testing should be different thanks to better resources. Two data base instances might be a good way to manage things. How will we manage documentation of this? N eed to have a streamlined test plan/process. JIRA agile may be a good place for this. Other applications are currently trying to create such documentation and may create a standard template for this. We can define exit and entrance values for Dev to QA even though they are on the same tier. Need to create a checklist. 		
Plans for the future of caCORE webservises.	Perhaps leave this in for this iteration.		
Discussion of JIRA #597	CTS2 Association Graph: Proposed as a CTS2 Specification implementation. Will leave this to be further discussed next week.
