

Redirecting the Reader to a Different Page

You can automatically redirect the reader to another page. For examples, try [searching for the Redirect macro](#).

To view or edit a page which redirects instantly due to the Redirect macro, add '?redirect=false' to the URL manually.

To create the redirection

1. In the page you want to change, click **Edit**.
2. Type as much of the following as needed to open the macro browser.

```
{redirect
```

3. Select the Redirect macro. The Insert 'Redirect' Macro dialog box appears.
4. Enter the URL of the page to which you want to redirect.
5. Consider entering a delay. A minimum of 5 seconds would make it easier for someone to edit the page.
6. Click **Insert**.
