

3.2 - Use Case Realization

This section describes the use of UML modelling approaches to support the realization of the use cases in section [3.1 - Use Case Leveling Approach](#) and thus to facilitate communication between business/requirements analysts and business architects ([Figure 2-2](#)). This includes the derivation of sequence diagrams that closely reflect steps documented on the wiki pages, and the identification of technical services and underlying components that implement behaviour of the system with which actors interact. This section includes the following topics:

- [3.2.1 - UML Sequence Diagrams](#)
- [3.2.2 - UML Components and the Services They Provide](#)
