| UNICODE Annex #29 Load for C1855

- Scott to discuss
| May need to determine an algorithm/analyzer to handle the removal of special chars (punctuation).

Standard analyzer is performing better than expected.

Whitespace junit tests are functioning fine with the Lucene testing framework.

String Analyzer - slight differences - removes capitalization, special chars (ie. exclamation points)

It was suggested that both cases (include/remove special chars) be supported.

Implementation is fine as it now stands. Need to consider an extension for single char searches. |

| Metadata Index handling

- Scott to discuss
| Scott verified what was working and not working.

Successfully implemented removal of metatdata - to be used in the GUI.

Tracy would like to have command line removal - not high priority.

Tracy would like metadata removed when coding scheme is removed. This should be version specific. |

Namespace loading issue investigation • LEXEVS-1033	Latest representation of OBI needs to be reviewed by Gilberto. More time needed to evaluate. NPO issue was not replicated. HL7 issue - referred to the notes about the loader. There are no namespaces (JIRA should be created specifically for this issue). RIM vs MIF loader discussion - not sure when MIF can be used to start loading HL7. Currently, Tracy indicated they are still using the RIM loader. There was never a full evaluation of the MIF loader by Gilberto to determine if can be used in production. NCI to evaluate and decide if MIF can be used.
VPN and network evaluation • Update from Gilberto and Jason	No updates.
External Requests • ?	Nothing this week.
HTTPS - Applications Migrating to HTTPS: Place Holder • LexEVS CTS2 REST Services • LexEVS API Services	By end of 2016, all applications will need to be using HTTPS. Mayo team to create JIRA items for backlog. May need to spend some time evaluating as part of 6.4 development.
caDSR update - Larry	caDSR curation tool - failed AppScan. Can still deploy, but behind NCI firewall.
