CTRP Planning	No updates from Sherri.
• Update from Larry	Gilberto was at CTRP's demo on Monday for their requirements. He mentioned that there were no LexEVS requirements at this time.
	Sherri was wondering if there are any requirements for LexEVS. Larry commented that there were no requirements for us at this time.
	Larry will send a note to Jose to see if they have any requirements for LexEVS.

Value Set Resolution	The properties file for the browser was missing the cache and max value properties. This properties file needs to be propagated from from DATA_QA to PROD to fix this issues.
⚠️ [LEXEVS-1516](#) - Jira project doesn't exist or you don't have permission to view it.	Rob will update the this JIRA issue with this information.
6.4 Performance testing	Tracy put the NCI value sets out on the SFTP site for Scott.
⚠️ [LEXEVS-1527](#) - Jira project doesn't exist or you don't have permission to view it.	Scott will load these value sets on our DEV system.
	Scott will be using Java JMH performance harness for performance testing of reading all of these value sets.
	This will show the difference between the multi index performance and the single index performance.
Ability to get and load all of the value sets	

Search Extension Testing Requirements	This what is used for text searching. We will want to focus our testing on the text searching performance. Jason mentioned they will test the 6.4 artifacts with the browser scripts.
Nexxus Testing	Scott will be testing the Nexxus upgrade on the Wednesday, 2016.02.03.
Production Remote Service not accessible • Tracy	Scott is waiting to get the PROD logs to investigate further. Tracy will send the logs to Scott.
6.4 Artifacts	We have sprint 21 artifacts available for 6.4. This release has the search extension features working. Scott/Cory will install this on the NCI DEV system.
6.3.0.2 Testing Update	NCI will test and let us know their findings.
LexEVS External Users	No updates.
Namespace Navigation between coding schemes • Review how this works	Gilberto wanted to review way this namespace navigation works between coding schemes. The way it is implemented, we can go across coding schemes. Scott mentioned that there are limitations based on the namespaces. If there are two coding schemes with the same namespace, this is not supported. If there are multiple versions of the coding scheme, it will go to the PRODUCTION version. Scott suggested that Gilberto should come up with a scenario and then we can create a manifest to show how it can be supported. Gilberto suggested that they will test with OBI and NBO.
