Progress

Scott	- Sprint 23 - On going Support
Cory	- Sprint 23 - On going Support

Craig	• Sprint 23 • Agile Admin

Agenda

Sprint Status	Current Sprint - Sprint 23 (February 04, 2016 – February 17, 2016) LexEVS S13-500 Agile Development - Sprint Status#SprintStatus-Sprint23 Craig reviewed what is needed to exit phase 4 (core Lucene development) and what will need to be worked on in phase 5. Craig also reviewed the roadmap. We added one more sprint to phase 4 to finish up all of the issues. Also, deployment and documentation will happen concurrently.
Nexxus Testing • Delayed and rescheduled for Feb 17	We haven't heard back from Toky yet. TODO: Craig to get the latest status from Toky on the scheduled testing.
6.4 Install on Dev • Update from Craig	Kim noted that testing from his term browser to DATA_QA (remote API) doesn't work. But it does work on PROD (remote API). NCI is considering moving from the local LexEVS to the LexEVS remote API. They need to first evaluate performance between the local and remote API Tin mentioned that he will do some performance testing will be done by next Monday.
6.3.0.2 RC Testing with Term Browser • Finding updates from Jason/Kim	Kim found an issue in view in hierarchy. Kim created a JIRA issue for this. ⚠ LEXEVS-1627 - Jira project doesn't exist or you don't have permission to view it. This is a different issue than the namespace issue that was fixed for 6.3.0.2 RC1. Scott will look into how to create complex properties for Tracy.
VPN Testing • Update from Scott and Cory	LexEVS 6.4 VPN Analysis Based on our testing, we found that the Site-to-Site VPN was a bit slower than the software VPN. Additionally, the software VPN is more versatile in it's usage (don't need to be hardwired, can connect to multiple DEV servers at NCI).
LexEVS External Users	No updates.
6.4 Deployment	How to make this more DevOPs like to streamline testing: • Run queries against the API ahead of time before handing it over to QA • Mayo to test with Junits and to run against the latest terminologies from NCI. • NCI to remove some of the queries against automobiles and and do testing against the live data. TODO: Create a deployment wiki page to keep a running list of tasks we want to do for deploying 6.4.
