

NCRI

Summary

The NCRI collection was submitted as part of a small pilot project to show international collaboration between caBIG and the United Kingdom's [National Cancer Research Institute \(NCRI\)](#). The cases consist of multiple pulse-sequence MR imaging studies (including rectal coil probes) from 6 prostate cancer patients. Two of the cases (ASP308 and FPH309) also contain annotation files which point to the corresponding digitized histopathology slides stored at NCRI's servers.

Data Access

Collection Statistics	
Modalities	MR, HISTOPATHOLOGY
Number of Patients	6
Number of Studies	10
Number of Series	72
Number of Images	985

You can [view and download these images on NBIA](#). You do not need to log in unless you want access to advanced features in the site. Simply follow these steps:

- Navigate to <http://imaging.nci.nih.gov>
- Click the "Search Images" link in the center of the page
- Scroll down through the search criteria until you see the "Collections" section
- Select the "NCRI" check box
- Press "Submit"

This will return the full list of cases included in the collection. To download the associated DICOM images:

- Press the "Check All" button and then "Add to Basket"
- Press the "View My Basket" button at the bottom of the page (or "View Contents" in the left menu bar)
- Press the "Download Manager" button to open a Java applet and specify where you'd like to save your images
