

Dashboard Intro - Include v4.4

The abstraction dashboard enables you to track the progress of, and process, clinical trials. The PA application displays the abstraction dashboard automatically each time you log in. It has the following tabbed pages:

- **Workload** page - Lists trials that require processing and sorts them by the date on which abstraction should be complete.
- **Details** page - PA displays this page only after you have selected a trial from the *Workload* page. Provides details of that trial and links to the *Trial Identification* page, where you can do the following:
 - Check in and check out trials for processing
 - Review the trial's check-out history
 - Begin your abstraction
 - Download the Trial Summary Report (TSR)

Accessing the Abstraction Dashboard

You can access the abstraction dashboard at any time. On the main menu, under **Dashboards**, select the name of the role you are using.
