OWL2 Loader - source and rep form	Discussion Points: • ⚠ LEXEVS-3252 - Jira project doesn't exist or you don't have permission to view it. • This is a new request. This isn't a high priority as there is a work around. Decision Points:

Value Set Dev Load Discussion
 	
• Monolithic Index
• Load Restart
• Direct resolve
• Name Conflict issue
	Discussion Points:
	
	• Monolithic Index - This may improve performance during searches.
	   ◦ Rob suggested this would be helpful.
	   ◦ Scott will create a JIRA item to capture this.
	• Load Restart - If a load is cancelled, it would nice to have the ability to have the load restarted. This may be a complex issue.
	   ◦ Rob stated that loading will typically be on data QA and will be faster, so this feature is not necessary at this point.
	• Direct resolve - Scott suggested we should consider moving to this model.
	• Name Conflict issue - Indexes where the name is 50 characters or longer, get truncated. Indexes are getting over written.
	   ◦ Coding scheme name size is 50 characters long.
	   ◦ We will attempt to fix without changing the size in the DB (no schema change).
