Protege 1.4.3 Release Notes
07 February 2011

Product Changes

The objective of this release of Protégé 1.4.3 is to provide the remaining bugs fixes found in previous Protégé releases that have been determined to be a priority for the final release of Protégé. Currently, there is no development planned after the 1.4.3 release.

Behavior to be Aware Of

GForge number	Brief description of item	Workaround
GF#30038	Change of Semantic_Type value after changing PTs.	—
GF#30265	Possible bug in LQT	<i>If user encounters this issue and wants to continue to proceed with the clone immediately, they must resolve the invalid class name and delete and re-type the definition in the "Clone" dialog box. Then click OK to save</i>
GF#30338	If only 2 N&S restriction and one is removed through merge of filler values - shows as defined	<i>Users should probably manually check known referencing classes before or after the merge. User is able to correct the issue by either indicating that the concept is no longer fully defined or adding a condition that makes it fully defined.</i>
GF#30352	Changing Concept Name in namespace and refreshing causes blank preferred name	<i>The workaround is to re-start the client.</i>
GF#30375	After resolving referencing class in PreRetire, does not refresh referencing classes list	<i>If the user is aware of the refresh issue, they can continue editing without consequence. If they want to visually confirm that all referencing classes have been resolved, they can clear the PreRetire pane and re-drag in the class and examine the referencing classes sub-tab.</i>
GF#30376	If rename class_name two classes, can never PreMerge them.	<i>The workaround is to toggle around in the OWLClasses panel until the classes appear with their full uris. It is then safe to use the renamed classes in merges/splits</i>
GF#30378	Null pointer if renamespace while class is loaded in Merge tab.	<i>The workaround is toggle around in the OWLClasses panel until the classes appear with their full uris. It is then safe to use the renames classes in merges/splits</i>
GF#30401	Inability to export data from DB to OWL file, and inability to class	<i>Cleanup scripts are available that server as the workaround</i>
GF#30516	Language on Definition not displayed in Edit Tab	<i>The workaround is to restart the Protege server.</i>

List of Bug Fixes

GForge number (hyperlinked)	Brief description of item
29517	When invalid format is provided on a clone it doesn't retain previously entered Definition
29752	Generate Reports shows undesirable internal values

29753	Extra box character shows in generated report
29758	Duplicate restrictions are found in the class BRCA1_wt_Allele.
29770	Concept History Plugin - OLD_PARENT is deleted during save of concept history
29923	Unable to search from box by hitting return key
30082	Explanation Server Does Not Properly Startup for NPO Vocabulary
30111	Modeler can't create workflow tasks
30414	Can edit a parent to a retired class.
30416	Workflow modeler cannot edit assignment

Other Items Closed

The defects in the following list were not reproducible, or were fixed as a by-product of refactoring, or were related to configuration setup.

GForge number (hyperlinked)	Brief description of item
29720	PreMerge "two concepts" after renaming them is not allowed.
30265	Possible bug in LQT

Remaining Issues

The defects in the following list were not reproducible, or were fixed as a by-product of refactoring, or were related to configuration setup.

GForge number (hyperlinked)	Brief description of item
30038	Change of Semantic_Type value after changing PTs
30305	When cloning, not escaping definition if invalid class name
30338	If only 2 N&S restriction and one is removed through merge of filler values - shows as defined
30352	Changing Concept Name in namespace and refreshing causes blank preferred name
30375	After resolving referencing class in PreRetire, does not refresh referencing classes list
30376	If rename class_name two classes, can never PreMerge them
30378	Null pointer if rename namespace while class is loaded in Merge tab
30401	Inability to export data from DB to OWL file, and inability to classify
30516	Language on Definition not displayed in Edit Tab

CORE Product Dependencies

No caCORE dependencies. This software is used for editing and maintaining NCI Thesaurus and BiomedGT.

Release History

Release	Date
1.0	Jun 07
1.1	Sept 07
1.2.0	Dec 07
1.2.1	Feb 08
1.2.2	May 08

1.2.3	Jul 08
1.2.3 Patch	Aug 08
1.3.0	Mar 09
1.4.0	Sep 09
1.4.1	Jan 10
1.4.2	Sep 10
1.4.3	Feb 11
