Information

Identifier:

1.47E+12

Description:

This study enumerates the detection of circulating tumor cells CTCs under conditions of two pre-analytical variables: blood collection tubes BCT Streck, EDTA, Heparin, Citrate, ACD and CellSave and four times-to-assay TTA on the bench 24 and 72 hours, as well as two CTC detection methods: HCS and CellSearch.

- 2. Click **Download Full Data**. (This button is available only when the entire investigation is available to your user account and when the investigation has data.) The Request Data Files dialog box appears. It offers different options depending on whether you are logged in to CSSI DCC.

- If you are not logged in, the following dialog box appears:

Request Data Files

Click "Download" to download the full investigation data.

Email Address

Email (optional) will be used to communicate any issues with download.
