

Hide Data with the Hidden Data Macro

The hidden data macro hides the content that is in the macro when the page is being viewed, while allowing the content to be modified in the Edit Contents view. This page shows the general form and provides an example.

[More information](#) 

The general form is

```
{hidden-data:whenEmpty=Name|whenNoRows=Name|whenHasRows=Name}  
Hidden content.  
{hidden-data}
```

An example follows.

```
{hidden-data:whenEmpty=HiddenTextTest}  
This whole section is hidden if the text below is blank.  
{text-data:HiddenTextTest}{text-data}  
{hidden-data}
```

The hidden data macro establishes the capability to hide data and contains a text data macro. The entire hidden data section is hidden because the text box from the text data macro is not completed in the Edit Contents view.
