

Using dm_download_dataobject_presigned

If your user account has the Read permission level on a collection, you can download a data file in that collection to your local system.

Run the following command:

```
dm_download_dataobject_presigned [optional parameters] <source-path> <destination-file>
```

The following table describes each parameter:

Parameter	Description
[-h]	If you want to print a usage (help) message for this command, specify this option.
[-D <REST-response>]	An optional parameter, specifying a path and filename in your local system. The system always creates a response file: <ul style="list-style-type: none">• If you specify this parameter, the system saves the response from the server to the specified file in the specified location.• If you do not specify this parameter, the system saves the file as download-dataobject-response-header.tmp in your home directory.
<source-path>	A path within DME. Specify the data file that you want to download.
<destination-file>	A path in your local system. Specify where you want the system to create the downloaded file. The destination folder structure you specify must already exist.

The following example downloads a sample.txt file from the Project_Orig collection in DME to a JaneDoe folder.

```
dm_download_dataobject_presigned /Example_Archive/PI_Lab1/Project_Orig/sample.txt /NCI/JaneDoe
```
