## Introduction

This document is a section of the Loader Guide. It was formerly the LexEVS v5.0 Loader Mapping Guide.
For the LexEVS v5.1 enhancements to the RRF loader, see the Loader Source Mapping section.
OWL Mapping - 4.2.1

## OWL: RDF Schema Features

## OWL Mapping - Protégé (4.2.1)

| OWL Element | LexGrid | Comments |
| :--- | :--- | :--- |
| owl:ontology | codingScheme | No comments |
| xml:lang | codingScheme.defaultLanguage | Default is 'en' |
| dc:title | codingScheme.formalName | No comments |
| rdfs:label | codingScheme.localName | No comments |
| URI | codingScheme.registeredName | No comments |
| owl:versionlnfo | codingScheme. <br> representsVersion | Default is 'UNASSIGNED' |
| dc:rights | codingScheme.copyright | No comments |
| owl:Class (Thing, <br> Nothing) | concept | No comments |
| rdf:ID | concept.conceptCode | No comments |

| rdf:ID | concept.isActive | Hard coded as "Active" |
| :---: | :---: | :---: |
| rdf:ID | concept.isAnonymous | No comments |
| rsfs:label | concept.entityDescription | No comments |
| rdf:comment | concept.comment | No comments |
| rdfs:subClassOf | association | No comments |
| rdfs:subClassOf | association.id = "subClassOf" | No comments |
| rdfs:subClassOf | association.forwardName = "subClassOf" | No comments |
| rdfs:subClassOf | association.isFunctional = "false" | No comments |
| rdfs:subClassOf | association.isNavigable = "true" | No comments |
| rdfs:subClassOf | association.isReflexive="true" | No comments |
| rdfs:subClassOf | association.isSymmetric="false" | No comments |
| rdfs:subClassOf | association.isTransitive="true" | No comments |
| rdf:Property (ObjectProperty) | association | An association between two classes (hasDomain, hasRange) |
| rdf:Property (DatatypeProperty) | association concept.conceptProperty | An association between one class (domain) and one association(hasDomain and hasDataProperty). The conceptProperty defines the range. |
| rdfs:subPropertyOf | association | No comments |
| rdfs:subPropertyOf | association.id = "subPropertyOf" | No comments |
| rdfs:subPropertyOf | association.forwardName = "subPropertyOf" | No comments |
| rdfs:subPropertyOf | association.isFunctional = "false" | No comments |
| rdfs:subPropertyOf | association.isNavigable = "true" | No comments |
| rdfs:subPropertyOf | association.isReflexive="true" | No comments |
| rdfs:subPropertyOf | association.isSymmetric="false" | No comments |
| rdfs:subPropertyOf | association.isTransitive="true" | No comments |
| rdfs:domain | association | No comments |
| rdfs:domain | association.id = "hasDomain" | No comments |
| rdfs:domain | association.forwardName = "hasDomain" | No comments |
| rdfs:domain | association.isNavigable = "true" | No comments |
| rdfs:domain | association.isReflexive="false" | No comments |
| rdfs:domain | association.isSymmetric="false" | No comments |
| rdfs:domain | association.isTransitive="true" | No comments |
| rdfs:range | association | No comments |
| rdfs:range | association.id = "hasRange" | No comments |
| rdfs:range | association.forwardName = "hasRange" | No comments |
| rdfs:range | association.isNavigable = "true" | No comments |
| rdfs:range | association.isReflexive="false" | No comments |
| rdfs:range | association.isSymmetric="false" | No comments |
| rdfs:range | association.isTransitive="false | No comments |
| Individual | association | A 'hasInstance' association is created. (ie. sourceld = Country, targetld = America) |
| Individual | association.id = "hasInstance" | No comments |

## OWL: (In)Equality

## OWL Mapping - Protégé (4.2.1)

| OWL Element | LexGrid | Comments |
| :---: | :--- | :---: |
| owl:equivalentClass | association | No comments |

| owl:equivalentClass | association.id = "equivalentClass" | No comments |
| :---: | :---: | :---: |
| owl:equivalentClass | association.forwardName = "equivalentClass" | No comments |
| owl:equivalentClass | association.isFunctional = "false" | No comments |
| owl:equivalentClass | association.isNavigable = "true" | No comments |
| owl:equivalentClass | association.isReflexive="true" | No comments |
| owl:equivalentClass | association.isSymmetric="true" | No comments |
| owl:equivalentClass | association.isTransitive="true" | No comments |
| owl:equivalentClass | association.reverseName="equivalentClass" | No comments |
| owl: equivalentProperty | association | No comments |
| owl: equivalentProperty | association.id = "equivalentProperty" | No comments |
| owl: equivalentProperty | association.forwardName = "equivalentProperty" | No comments |
| owl: equivalentProperty | association.isFunctional = "false" | No comments |
| owl: equivalentProperty | association.isNavigable = "true" | No comments |
| owl: equivalentProperty | association.isReflexive="true" | No comments |
| owl: equivalentProperty | association.isSymmetric="true" | No comments |

| owl:sameAs | association | No comments |
| owl:sameAs | association.id = "sameAs" | No comments |
| owl:sameAs | association.forwardName = "sameAs" | No comments |
| owl:sameAs | association.isFunctional = "false" | No comments |
| owl:sameAs | association.isNavigable = "true" | No comments |
| owl:sameAs | association.isReflexive="true" | No comments |
| owl:sameAs | association.isSymmetric="true" | No comments |
| owl:sameAs | association.isTransitive="true" | No comments |
| owl:sameAs | association.reverseName="equivalentProperty" | No comments |
| differentFrom | association | No comments |
| differentFrom | association.id = "differentFrom" | No comments |
| differentFrom | association.forwardName = "differentFrom" | No comments |
| differentFrom | association.isFunctional = "false" | No comments |
| differentFrom | association.isNavigable = "true" | No comments |
| differentFrom | association.isReflexive="true" | No comments |
| differentFrom | association.isSymmetric="true" | No comments |
| differentFrom | association.isTransitive="true" | No comments |
| differentFrom | association.reverseName= "differentFrom" | No comments |
| owl:AllDifferent | association | No comments |
| owl:AllDifferent | association.id = "AllDifferent" | No comments |
| owl:AllDifferent | association.forwardName = "AllDifferent" | No comments |
| owl:AllDifferent | association.isFunctional = "false" | No comments |
| owl:AllDifferent | association.isNavigable = "true" | No comments |
| owl:AllDifferent | association.isReflexive="true" | No comments |
| owl:AllDifferent | association.isSymmetric="true" | No comments |

| owl:AllDifferent | association.isTransitive="true" | No comments |
| :--- | :--- | :--- |
| owl:AllDifferent | association.reverseName= "AllDifferent" | No comments |

## OWL: Property Characteristics

## OWL Mapping - Protégé (4.2.1)

| OWL Element | LexGrid | Comments |
| :--- | :--- | :--- |
| owl:inverseOf | association | No comments |
| owl:inverseOf | association.id = "inverseOf" | No comments |
| owl:inverseOf | association.forwardName $=$ <br> "inverseOf" | No comments |
| owl:inverseOf | association.isFunctional = "false" | No comments |
| owl:inverseOf | association.isNavigable = "true" | No comments |
| owl:inverseOf | association.isReflexive="true" | No comments |
| owl:inverseOf | association.isSymmetric="true" | No comments |
| owl:inverseOf | association.isTransitive="true" | No comments |
| owl:inverseOf | association.reverseName="inverseOf" | No comments |
| owl:TransitiveProperty | association.isTransitive | association property 'isTransitive' |
| owl:SymmetricProperty | association.isSymmetric | association property 'isSymmetric' |
| owl: | association.isReverseFunctional | association property <br> InveverseFunctional' |
| owl:FunctionalProperty | association.isFunctional | association property 'isFunctional' |

## OWL: Property Restrictions

## OWL Mapping - Protégé (4.2.1)

| OWL Element | LexGrid | Comments |
| :--- | :--- | :--- |
| owl:Restriction | concept | Create an anonymous concept for the restriction |
| owl:Restriction | concept.id | System generated |
| owl:Restriction | concept.isActive = true | No comments |
| owl:Restriction | concept.isAnonymous = true | Hardcoded "True" |
| owl:onProperty | association.id | No comments |
| owl: <br> allValuesFrom | concept.entityDescription | String of allValuesFrom values |
| owl: <br> allValuesFrom | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented <br> numerical value. |
| owl: <br> allValuesFrom | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl: <br> allValuesFrom | concept.presentation.isPreferred = true | Hardcoded "true" |
| owl: <br> allValuesFrom | concept.presentation.text | String of allValuesFrom values |
| owl: <br> allValuesFrom | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl: <br> allValuesFrom | concept.conceptProperty.propertyName $=$ <br> type | Hardcoded "type" |
| owl: <br> allValuesFrom | concept.conceptProperty.text = "owl: <br> unionOf" | No comments |
| owl: <br> someValuesFrom | concept.entityDescription | String of someValuesFrom values |
| owl: <br> someValuesFrom | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented <br> numerical value. |
| owl: <br> someValuesFrom | concept.presentation.propertyName | Hardcoded "textualPresentation" |

| owl: <br> someValuesFrom | concept.presentation.isPreferred = true | Hardcoded "true" |
| :---: | :---: | :---: |
| owl: <br> someValuesFrom | concept.presentation.text | String of someValuesFrom values |
| owl: <br> someValuesFrom | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl: <br> someValuesFrom | concept.conceptProperty.propertyName = type | Hardcoded "type" |
| owl: <br> someValuesFrom | concept.conceptProperty.text = "owl: intersectionOf" | No comments |
| owl:intersectionOf | concept.entityDescription | String of intersectionOf values (ie. Pizza and not VegetarianPizza) |
| owl:intersectionOf | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
| owl:intersectionOf | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl:intersectionOf | concept.presentation.isPreferred = true | Hardcoded "true" |
| owl:intersectionOf | concept.presentation.text | String of intersectionOf values (ie. Pizza and not VegetarianPizza) |
| owl:intersectionOf | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl:intersectionOf | concept.conceptProperty.propertyName = type | Hardcoded "type" |
| owl:intersectionOf | concept.conceptProperty.text = "owl: intersectionOf" | No comments |
| UnionOf | concept.conceptProperty.text = "owl: unionOf" | No comments |
| owl: complementOf | association | association.id = "subClassOf" |
| owl:oneOf | concept.entityDescription | String of oneOf values |
| owl:oneOf | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
| owl:oneOf | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl:oneOf | concept.presentation.isPreferred = true | Hardcoded "true" |
| owl:oneOf | concept.presentation.text | String of oneOf values |
| owl:oneOf | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl:oneOf | concept.conceptProperty.propertyName = type | Hardcoded "type" |
| owl:oneOf | concept.conceptProperty.text = "owl: intersectionOf" | No comments |
| owl:hasValue | associationQualification.nameAndValueList. content | No comments |
| owl:minCardinality | concept.entityDescription | String of minCardinality Values (ie. (hasTopping min 3) and Pizza) |
| owl:minCardinality | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
| owl:minCardinality | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl:minCardinality | concept.presentation.isPreferred = true | Hardcoded "true" |
| owl:minCardinality | concept.presentation.text | String of minCardinality Value (ie. (hasTopping min 3) and Pizza) |
| owl:minCardinality | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl:minCardinality | concept.conceptProperty.propertyName $=$ type | Hardcoded "type" |
| owl:minCardinality | concept.conceptProperty.text = "owl: intersectionOf" | No comments |
| owl: maxCardinality | concept.entityDescription | String of maxCardinality Values (ie. (hasTopping max 2) and Pizza) |
| owl: maxCardinality | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented numerical value. |
| owl: maxCardinality | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl: maxCardinality | concept.presentation.isPreferred = true | Hardcoded "true" |

| owl: <br> maxCardinality | concept.presentation.text | String of maxCardinality Values (ie. (hasTopping max 2) and Pizza) |
| :--- | :--- | :--- |
| owl: <br> maxCardinality | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl: <br> maxCardinality | concept.conceptProperty.propertyName = <br> type | Hardcoded "type" |
| owl: <br> maxCardinality | concept.conceptProperty.text = "owl: <br> intersectionOf" | No comments |
| owl:cardinality | concept.entityDescription | String of cardinality Values |
| owl:cardinality | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily incremented <br> numerical value. |
| owl:cardinality | concept.presentation.propertyName | Hardcoded "textualPresentation" |
| owl:cardinality | concept.presentation.isPreferred = true | Hardcoded "true" |
| owl:cardinality | concept.presentation.text | String of maxCardinality Values (ie. (hasTopping max 2) and Pizza) |
| owl:cardinality | concept.conceptProperty.propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| owl:cardinality | concept.conceptProperty.propertyName $=$ <br> type | Hardcoded "type" |
| owl:cardinality | concept.conceptProperty.text = "owl: <br> intersectionOf" | No comments |
| owl:disjointWith | association | association.id = "disjointWith" |
|  |  |  |

## OWL: Annotation Property

## OWL Mapping - Protégé (4.2.1)

| OWL <br> Element | LexGrid | Comments |
| :--- | :--- | :--- |
| rdfs:label | Presentation | No comments |
| rdfs:label | concept.presentation.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily <br> incremented numerical value. |
| rdfs:label | concept.presentation.propertyName = <br> "textualPresentation" | Hardcoded "textualPresentation" |
| rdfs:label | concept.presentation.isPreferred = true | Hardcoded "true" |
| rdfs:label | concept.presentation.text | Value of rdfs:label |
| rdfs:comment | Comment | No comments |
| rdfs:comment | concept.comment.propertyld | Generated value for property textual presentation using "P" concatenated with a steadily <br> incremented numerical value. |
| rdfs:comment | concept.comment.propertyName = "comment" | Hardcoded "comment" |
| rdfs:comment | concept.presentation.text | Value of rdfs:comment |
| rdfs:seeAlso | conceptProperty | No comments |
| rdfs: <br> isDefinedBy | conceptProperty | No comments |

## OWL: Versioning

## OWL Mapping - Protégé (4.2.1)

| OWL Element | LexGrid | Comments |
| :--- | :--- | :--- |

## Concepts

## UMLS Mapping

| RRF <br> File <br> Name | RRF Column Name | RRF Definition | NCl Meta only | LexGrid <br> Model <br> Element | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MRCONS O.RRF | CODE | Unique Identifier or code for string in source | NA | concept. conceptCode | No comments |
| MRCONS O.RRF | CUI | Unique identifier for concept | x | concept. conceptCode | No comments |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept.isActive | Hardcoded in parameter as true. |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. conceptStatus | Hard coded as constant in java file as "Active" |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. isAnonymous | Hardcoded in parameter as false. |
| MRCONS O.RRF | STR | String | NA | concept. entityDescription | No comments |
| MRCONS O.RRF | STR | String | NA | concept. <br> conceptProperty. <br> Format | Hard coded as constant in java file as "text/plain" or null |
| MRCONS O.RRF | STR | String | NA | concept. conceptProperty. propertyName | May be hard coded as constant in java file as one of several properties. |
| MRCONS O.RRF | STR | String | NA | concept. conceptProperty. usageContext | No comments |
| MRCONS O.RRF | STR | String | NA | concept. conceptProperty. propertyld | Generated value for property using "P" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | STR | String | NA | concept. presentation. propertyld | Generated value for property textual presentation using "T" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | STR | String | NA | concept.comment. propertyld | Generated value for property comment using "C" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | STR | String | NA | concept.definition. propertyld | Generated value for property definition using "D" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | STR | String | NA | concept.instruction. propertyld | Generated value for property instruction using "l" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. conceptProperty. text.content. | No comments |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. conceptProperty. propertyld | Generated value for property using "CUI" concatenated with a steadily incremented numerical value. |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. conceptProperty. propertyName | Hard coded as constant in java file as "UMLS_CUI" |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. conceptProperty. propertyType | Hard coded as constant in java file as "property" |
| MRCONS O.RRF | CUI | Unique identifier for concept | NA | concept. <br> conceptProperty. format | Left as null |
| MRSTY. RRF | STY | Semantic type | NA | concept. conceptProperty. text.content | No comments |
| MRSTY. RRF | STY | Semantic type | NA | concept. conceptProperty. propertyld | Generated value for property using "SemType" concatenated with a steadily incremented numerical value. |

| MRSTY. RRF | STY | Semantic type | NA | concept. conceptProperty. propertyName | Hard coded as constant in java file as "Semantic_Type" |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MRSTY. RRF | STY | Semantic type | NA | concept. conceptProperty. propertyType | Hard coded as constant in java file as "property" |
| MRSTY. RRF | STY | Semantic type | NA | concept. conceptProperty. format | Hard coded as constant in java file as "text/plain" |
| MRCONS O.RRF | LAT | Language of Term(s) | NA | concept. conceptProperty. language | Logic of code simply selects the first definition in the source as the preferred source |
| MRCONS O.RRF | TS | Term status | NA | concept. presentation. isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRCONS O.RRF | STT | String type | NA | concept. presentation. isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRCONS O.RRF | ISPREF | Indicates whether AUI is preferred | NA | concept. presentation. isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRRANK. RRF | RANK | Termgroup ranking | NA | concept. presentation. isPreferred | One or a combination of these RRF values determines whether a presentation is preferred: LAT, TS, STT, ISPREF, RANK. |
| MRRANK. RRF | RANK | Termgroup ranking | NA | concept. presentation. isPreferred | The first presentation for each language is automatically marked as isPreferred="true" after using comparator to sort list of presentations using comparator to evaluate each presentation based on a combination of values from LAT, TS, STT, ISPREF, RANK. |
| MRDEF. RRF | DEF | Definition | NA | concept.definition. text.content | No comments |
| MRDEF. RRF | DEF | Definition | NA | concept.definition. isPreferred | Logic of code simply selects the first definition in the source as the preferred source |
| MRSAT. RRF | ATN | Attribute name | NA | concept. conceptProperty. propertyType | Translated to a LexGrid property type. For values AN, CX, HN this property is typed as a "COMMENT" in LexGrid. For value EV this property is typed "PRESENTATION" This only occurs when the STYPE points to the CODE, SCUI or SDUI columns in MRREL.RRF or MRCONSO.RRF. If the STYPE points to SAUI then the values are loaded as property qualifiers. |
| MRSAT. RRF | ATV | Attribute value | NA | concept. conceptProperty. propertyValue | No comments |
| MRSAT. RRF | ATN | Attribute name | NA | concept. conceptProperty. propertyQualifier. propertyQualifierld | If the STYPE points to SAUI then the value is loaded as a property qualifier attribute |
| MRSAT. RRF | ATV | Attribute value | NA | concept. <br> conceptProperty. <br> propertyQualifier. <br> content | If the STYPE points to SAUI then the value is loaded as a property qualifier attribute |
| MRCONS O.RRF | SAB | None | x | concept. conceptProperty. source.content | No comments |
| MRCONS O.RRF | SAB | None | x | concept. conceptProperty. propertyQualifier. propertyQualifierld | Hard coded as constant in java file as "source-code" |
| MRCONS O.RRF | CODE | None | x | concept. conceptProperty. propertyQualifier. content | No comments |
| MRCONS O.RRF | CODE | None | x | concept. conceptProperty. propertyQualifier. propertyQualifierld | Hard coded as constant in java file as "AUI" |
| MRCONS O.RRF | AUI | None | x | concept. conceptProperty. propertyQualifier. content | No comments |
| MRCONS O.RRF | AUI | None | x | concept. <br> presentation. <br> representationalFor <br> m | When ATN value is EV this presentation will be given a representationalForm of "Abbrev." |
| MRCONS O.RRF | TTY | Term type in source | NA | concept. presentation. representationForm | When TTY value is FN then representationalForm is represented as "Full Form" Otherwise the representationalForm is the same as the TTY source (i.e. if TTY is PT then representationalForm is PT.) PT is one of the preferred presentations. |
| MRCONS O.RRF | TTY | Term type in source | NA | concept. conceptProperty. propertyQualifier. propertyQualifierld | Hard coded as "HCD" |
| MRHIER. RRF | HCD | Source asserted hierarchical number or code for this atom in this context | NA | concept. <br> conceptProperty. propertyQualifier. content | This propertyQualifier is present when the HCD is populated in the the MRHIER file. The corresponding code and property for concept or code is qualified as a code or concept with a context derived heirarchy. |

## Relations

## UMLS Mapping

| RRF <br> File <br> Name | RRF <br> Column <br> Name | RRF <br> Definition | NCI <br> Meta <br> only | LexGrid Model Element | Comments |
| :--- | :--- | :--- | :--- | :--- | :--- |
| MRREL. <br> RRF | CUl1 | Unique <br> identifier for <br> first concept | NA | None | No comments |

| MRREL. RRF | AUl1 | Unique identifier for first atom | NA | None | No comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MRCONS O.RRF | Code | Unique Identifier or code for string in source | NA | ConceptReference.conceptCode (Model element is a ResolvedConceptReference with the value sourceOf attached to the appropriate AssociationList containing this particular REL or RELA association name.) | Mapping to the CODE depends upon the CUI or a combination of CUI and AUI values. If the CODE value is "NOCODE" then LexBIG concatenates "NOCODE" with a "-" and the CUI value. Target or source code value requires use of the DIR flag which indicates the directionality of the relationship in REL or RELA. CUI1 can be used as a pointer to the source CODE value if DIR equals Y, else CUI1 is the targetCode. Similarly, if an AUI exists AUI1 can be an indicator for CODE value to be either or source or target depending on the DIR flag. |
| MRREL. RRF | CUI2 | Unique identifier for second concept | NA | None | No comments |
| MRREL. RRF | AUI2 | Unique identifier for second atom | NA | None | No comments |
| MRCONS O.RRF | CODE | Unique Identifier or code for string in source | NA | ConceptReference.conceptCode (Model element is a ResolvedConceptReference with the value targetOf attached to the appropriate AssociationList containing this particular REL or RELA association name.) | Mapping to the CODE depends upon the CUI or a combination of CUI and AUI values. If the CODE value is "NOCODE" then LexBIG concatenates "NOCODE" with a "-" and the CUI value. Target or source code value requires use of the DIR flag which indicates the directionality of the relationship in REL or RELA. CUI2 can be used as a pointer to the source CODE value if DIR equals Y, else CUI1 is the targetCode. Similarly, if an AUI exists AUI2 can be an indicator for CODE value to be either or source or target depending on the DIR flag. |
| MRREL. RRF | DIR | Source asserted directionality flag | NA | None | The UMLS directional flag. Y indicates that this is the direction of the RELA relationship in its source; N indicates that it is not; otherwise indicates that it is not important or has not yet been determined. (If blank RELA, we interpret as ' N ', based on empirical review of meta files). |
| MRREL. RRF | RELA | Relationship attribute | NA | association.id (id inherited from Entity) | Source defined associations. If RELA value is "inverse_isa" then it is changed to "hasSubtype." All others mapped as defined in source. |
| MRREL. RRF | REL | Relationship | NA | association.id (id inherited from Entity) | UMLS defined associations |
| MRSAT. RRF | METAUI | Metathesaurus asserted unique identifier | NA | None | Presence of RUI in MRSAT.RRF METAUI column indicates the association defined in MRREL has an association qualifier. Currently only MedDRA uses these. |
| MRSAT. RRF | ATN | None | NA | AssociatedConcept.nameAndValueList. name | No comments |
| MRSAT. RRF | ATV | None | NA | AssociationQualification. nameAndValueList.content | No comments |
|  |  |  | NA | AssociatedConcept.nameAndValueList. name | Qualifier name is hard coded to "HCD" This association qualifier is attached to an association when the HCD field in MRHIER.RRF is populated. Associations are identified by evaluating a structured series of AUl's that describe the path to root (PTR field in MRHIER) Once these associations are identified they have and association qualifier attached to them with the value of The HCD loaded as the qualifier. |
| MRHIER. RRF | HCD | None | NA | AssociationQualification. nameAndValueList.content | No comments |
| MRSAB. RRF | SSN | Source short name | NA | association.codingSchemeld (Inherited from Entity) | No comments |
| MRREL. RR | REL or RELA | Relationship or Relationship attribute | NA | association.forwardName | Unqualified REL or RELA value (inverse_isa remains the same) |
| MRDOC. RRF | EXPL | Detailed explanation | NA | association.reverseName | Where DOCKEY in MRDOC equals REL or RELA and value is the association name and TYPE is REL or RELA name prepended to "_inverse". |
| $\begin{aligned} & \text { MRDOC. } \\ & \text { RRF } \end{aligned}$ | EXPL | Detailed explanation | NA | association.inverse | Hard coded as a blank string. |
| $\begin{aligned} & \text { MRDOC. } \\ & \text { RRF } \end{aligned}$ | EXPL | Detailed explanation | NA | association.isAntiReflexive | Hard coded to null. |
| MRDOC. RRF | EXPL | Detailed explanation | NA | association.isAntiSymmetric | Hard coded to null. |
| MRDOC. RRF | EXPL | Detailed explanation | NA | association.isAntiTransitive | Hard coded to null. |
| MRDOC. RRF | EXPL | Detailed explanation | NA | association.isAntiTransitive | Hard coded to null. |
| MRDOC. RRF | EXPL | Detailed explanation | NA | association.isNavigable | Hard coded as Boolean with value true. |
| $\begin{aligned} & \text { MRDOC. } \\ & \text { RRF } \end{aligned}$ | EXPL | Detailed explanation | NA | association.isReflexive | Hard coded to null. |
| $\begin{aligned} & \text { MRDOC. } \\ & \text { RRF } \end{aligned}$ | EXPL | Detailed explanation | NA | association.isReverseFunctional | Hard coded to null. |
| $\begin{aligned} & \text { MRDOC. } \\ & \text { RRF } \end{aligned}$ | EXPL | Detailed explanation | NA | association.isSymmetric | Hard coded to null. |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | association.isTransitive | True when the name of the association can be mapped to a source defined in the SAB attribute of MRREL.RRF. Not the SAB value itself, but extrapolated from it using SAB to REL, RELA relationship. |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | association.isTranslationAssociation | Hard coded to null. |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | association.targetCodingScheme | Hard coded to null. |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | association.entityDescription.content (inheritance path for entityDescription is Entity->versionableAndDescribable) | Hard coded to: "UMLS-defined relationships" |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | None | No comments |
| MRREL. RRF | SAB, REL, RELA | Source abbreviation | NA | relations.dc | If REL, this is hard coded as "UMLS-Relations" if RELA then it is hard coded to "Relations" |
| MRREL. RRF | REL, RELA | None | x | propertyLink.link | This is a link established when the MRREL.RRF file contains a relationship where the CUI is related to itself. Under these conditions the relationship is mapped as a property link with the MRREL defined relationship mapped as the link value. |
| MRREL. RRF | REL, RELA | None | x | propertyLink.sourceProperty | Generated as a propertyld for concept, ex: "T-10" This is retrieved based on the AUI value in MRCONSO.RRF from the entityPropertyMultiAttrib table where the AUI equals the attributeValue column. |
| MRREL. RRF | REL, RELA | None | x | propertyLink.targetProperty | Generated as a propertyld for concept, ex: "T-10" This is retrieved based on the AUI value in MRCONSO.RRF from the entityPropertyMultiAttrib table where the AUI equals the attributeValue column. |

## SNOMED UMLS Mapping

| RRF File <br> Name | RRF Column <br> Name | RRF Definition | LexGrid Model Element | Comments |
| :--- | :--- | :--- | :--- | :--- |
| RSAB.RRF | SVER | Release date or version number of a <br> source | codingScheme. <br> representsVersion | No comments |
| RSAB.RRF | SSN | Source short name | codingScheme.codingScheme? | No comments |
| RSAB.RRF | SON | Source Official Name | codingScheme.formalName | No comments |
| RSAB.RRF | SON | Hard coded to "en" | codingScheme.defaultLanguage | No comments |
| MRSAT.RRF | ATV | None | concept.presentation.language | Unique to <br> snomed. |

## OBO Mapping

| OBO Class | OBO Entity | LexGrid Model Element | Notes |
| :---: | :---: | :---: | :---: |
| Document Header | format-version | None | Not mapped |
| Document Header | data-version | CodingScheme.representsVersion | Creates a codingSchemeVersion and SystemRelease record. If not specified, then hard coded "UNASSIGNED" |
| Document Header | version | CodingScheme.representsVersion | Deprecated - use data-version if present. |
| Document Header | date | None | Not mapped |
| Document Header | saved-by | None | Ignored but included if contained in the remark entity. |
| Document Header | auto-generated-by | None | Ignored but included if contained in the remark entity. |
| Document Header | subsetdef | None | Not mapped |
| Document Header | import | None | Deprecated - Imports are used to assemble a larger document from smaller. |
| Document Header | typeref | None | Deprecated |
| Document Header | synonymtypedef | None | Not mapped |
| Document Header | idspace | None | Not mapped. The idspace is a triple - localName, URN and description. |
| Document Header | default-relationship-id-prefix | None | Not mapped |
| Document Header | id-mapping | CodingScheme.supportedAssociation | This is more generalized than the LexGrid model, as it supports mapping between *any* id's. Note that its primary purpose, however, is to handle supportedAssociation. |
| Document Header | remark | CodingScheme.entityDescription | Will combine multiple remark entities into the entityDescription. |
| Document Header | default-namespace | codingScheme.codingScheme | Will use default-namespace if provided; otherwise will use filename without the extension. |
| Document Header | default-namespace | codingScheme.formalName | Will use default-namespace if provided; otherwise will use filename without the extension. |
| Document Header | default-namespace | codingScheme.registeredName | Combination of "urn:Isid:bioontology.org:" and if provided, the value in "default-namespace"; but if not will use filename without the extension. |
| Document Header | default-namespace | codingScheme.defaultLanguage | Hardcoded "en" |
| Document Header | default-namespace | codingScheme.isNative | Hardcoded "true" |
| Stanza | id | CodedEntry.conceptCode | No comments |
| Stanza | name | CodedEntry.entityDescription | No comments |
| Stanza | name | CodedEntry.presentation ['textualPresentation'].text | No comments |

| instance <br> stanza | instance_of | association['has_instance'] | No comments |
| instance <br> stanza | instance_of | CodedEntry.property.property="" | Data type properties go in Coded Entry property section |

## HL7 RIM Mapping

| HL7 <br> Table | HL7 Column | LexGrid Model Element | Notes | Intentionally Not Mapped | Outstanding Issues |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Model | <modellD> | <codingSchemeName> |  | None | None |
| Model | <name> | <formalName> |  | None | None |
| Model | <name> | <registeredName> | http://www.hl7.org/Library/data-model/RIM *[1] | None | None |
| Model | <name> | <defaultLanguage> | en* | None | None |
| Model | <versionNumber> | <representsVersion> |  | None | None |
| Model | <versionNumber> | <isNative> | 0* | None | None |
| Model | <versionNumber> | <approximateNumberofConcepts> | Result of count on concept bearing table? | None | None |
| Model | <versionNumber> | <firstRelease> | MISSING | None | None |
| Model | <versionNumber> | <modifiedRelease> | MISSING | None | None |
| Model | <versionNumber> | <deprecated> | MISSING | None | None |
| Model | <description> | <entityDescription> | None | None | None |
| Model | <description> | <copyright> | MISSING | None | None |
| $\begin{aligned} & \text { VCS_code_sy } \\ & \text { stem } \end{aligned}$ | codeSystemld | codingScheme.registeredName | Moved to metadata file. | None | None |
| $\begin{aligned} & \text { VCS_code_sy } \\ & \text { stem } \end{aligned}$ | codeSystemType | commonTypes::Properties | This is an HL7 specific code system property to distinguish internal vs external code systems. Moved to metadata file. | None | None |
| VCS_code_sy stem | codeSystemName | concept.conceptCode | Moved to metadata file. | None | None |
| $\begin{aligned} & \text { VCS_code_sy } \\ & \text { stem } \end{aligned}$ | codeSystemName | concept.presentation['textualPresentation'].text | None | None | None |
| VCS_code_sy stem | fulliname | codingScheme.formalName | None | None | None |
| $\begin{aligned} & \text { VCS_code_sy } \\ & \text { stem } \end{aligned}$ | description | codingScheme.entity Description | Moved to metadata file. | None | None |
| VCS_code_sy stem | releaseld | codingScheme.representsVersion | Moved to metadata file. | None | None |
| VCS_code_sy stem | copyrightNotice | codingScheme.copyright | Moved to metadata file. | None | None |
| VCS_code_sy stem | literal('en') | codingScheme.defaultLanguage | Moved to metadata file. | None | None |
| VCS_concept _code_xref | internalld | None | None | None | None |
| VCS_concept _code_xref | Concept Code | concept.conceptCode | None | RIM db column conceptCode2 | None |
| VCS_concept _code_xref | Case Difference | commonTypes::Properties | Basically a proprty to outline whether there are case differences in the Concept Code or not (mainly used, but not restricted tor units of measure) | RIM db column codelnstance | None |
| VCS_concept _code_xref | Status | concept.isActive=(conceptStatus=='A'?) | None | RIM db column conceptStatus | None |
| VCS_concept _code_xref | Status | concept.conceptStatus | Not used by HL7. A = isActive, R = retired | None | None |
| VCS_concept designation | internalld | None | foreign key | None | None |
| VCS_concept _designation | designation | concept.presentation['textualPresentation'].text | None | None | None |
| VCS_concept designation | designationSeq | None | None | None | None |
| VCS_concept _designation | language | concept.presentation['textualPresentation'].language | Can be omitted if language = default language | None | None |
| VCS_concept designation | preferredForLanguage | concept.presentation['textualPresentation']. isPreferred | None | None | None |
| VCS_concept _description | internalld | with(codeSystem[deref(internalld)].concept[deref (internalld)].definition | foreign key | None | None |
| VCS_concept _description | description | concept.presentation['textualPresentation'].text | None | None | None |
| VCS_concept _description | language | concept.presentation['textualPresentation'].language | None | None | None |

| VCS_concept _description | literal('true') | concept.presentation['textualPresentation']. isPreferred | None | None | None |
| :---: | :---: | :---: | :---: | :---: | :---: |
| VCS_concept _description | uniqueld() | concept.presentation['textualPresentation'].propertyld | None | None | None |
| VCS_concept _description | literal('definition') | concept.presentation['textualPresentation'].property | None | None | None |
| VCS_concept property | internalld | None | foreign key | None | None |
| VCS_concept property | propertyCode | concept.property.property | None | None | None |
| VCS_concept property | propertySeq | None | Currently not used by HL7 | None | None |
| VCS_concept property | propartyValue | concept.property.text | None | None | None |
| VCS_concept property | language | concept.property.language | None | None | None |
| VCS_concept _relationship | relationCode | association.association | None | None | None |
| VCS_concept _relationship | sourcelnternalld | associationInstance.sourceConcept | None | None | None |
| VCS_concept _relationship | targetInternalld | associationTarget.targetConcept | None | None | None |
| Model | modellD | systemRelease.releaseld | None | None | None |
| Model | name | service.service | None | None | None |
| Model | versionNumber | service.version | None | None | None |
| Model | lastModifiedDate | systemRelease.releaseDate | None | None | None |
| Model | developingOrganization | systemRelease.releaseAgency | None | None | None |
| Model | committeeld | None | None | None | None |
| Model | description | systemRelease.entityDescription | None | None | None |
| Model | concat('urn:oid: 2.16.840.1.113883:', systemRelease. releaseld) | systemRelease.releaseURN | None | None | None |
| Model | literal('true') | systemRelease.isLatest | Also have to set the prior release isLatest to false | None | None |
| Model | preceding-sibling /releaseOrder + 1 | systemRelease.releaseOrder | None | None | None |
| Model | modellD | commonTypes::Properties | None | None | None |
| (Special mapping for $\mathrm{NCl})$ | name | codingScheme.localName | None | None | None |
| (Special mapping for $\mathrm{NCl})$ | versionNumber | codingScheme.representsVersion | None | None | None |
| (Special mapping for $\mathrm{NCl})$ | lastModifiedDate | commonTypes::Properties | None | None | None |
| (Special mapping for $\mathrm{NCl})$ | developingOrganization | commonTypes::Properties | None | None | None |

| (Special mapping for $\mathrm{NCl})$ | preceding-sibling /releaseOrder + 1 | commonTypes::Properties | None | None | None |
| RIM_vocabula ry_domain | vocDomain | codingscheme["VocabularyDomain"].concept. conceptCode | Vocabulary Domains are carried in a code system of vocabulary domains. | None | None |
| RIM_vocabula ry_domain | vocDomain | codingscheme["VocabularyDomain"].concept. presentation["textualPresentation"].text | preferredPresentation | None | None |
| RIM_vocabula ry_domain | description | codingscheme["VocabularyDomain"].concept. definition.text | preferredDefinition for code | None | None |
| RIM_vocabula ry_domain | restrictsDomain | ```codingscheme" VocabularyDomain". association"hasSubtype". sourceConcept``` | Should this be hasSubtype or something else? | None | None |
| RIM_vocabula ry_domain | restrictsDomain | codingscheme["VocabularyDomain"].association ["hasSubtype"].targetconcept = vocDomain | None | None | None |

| VOC_code_re ference | usedToBuildValueSet | with(valueDomain[registeredName=current()/]]) | None | None | None |
| :---: | :---: | :---: | :---: | :---: | :---: |
| VOC_code_re ference | referencesConceptCode | ...valueDomainEntry/conceptCode | 1) id is synthesized <br> 2) Only stored if isHeadCode $==$ false or includeReferencedCode $==$ true | None | None |
| VOC_code_re ference | referencesInternalld | None | Internal id's aren't exposed in lexGrid | None | None |
| VOC_code_re ference | relationship | ...valueDomainEntry /includeChildren = (relationship == 'hasSubtype') | Won't deal w/ non-hasSubtype relationships, but HL7 doesn't have any. | None | None |
| VOC_code_re ference | includeReferencedCode | ...valueDomainEntry/isSelectable |  | Not in current implementation | None |
| VOC_code_re ference | leafOnly | None | Not used in HL7 Model | None | None |
| VOC_code_re ference | directChildrenOnly | None | Not used in HL7 Model | None | None |
| VOC_code_re ference | isHeadCode | None | Only used when referenced in VOC_value_set_constructor. | None | None |
| VOC_code_re ference | referencesCodeSystem | .../valueDomainEntry.codingScheme | Shortcut in HL7 model. Must = VOC_value_set.basedOnCodeSystem | None | None |
| VOC_code_re ference | arbitraryUniqueValue() | .../valueDomainEntry.id | None | None | None |
| VOC_register ed_code_syst em | codeSystemld | None | VOC_registered_code_system isn't currently transferred to Lexgrid | None | None |
| VOC_register ed_code_syst em | sponsor | None | None | None | None |
| VOC_register ed_code_syst em | publisher | None | None | None | None |
| VOC_register ed_code_syst em | versionReportingMethod | None | None | None | None |
| VOC_register ed_code_syst em | licensingInformation | None | This field should really be transfer to copyright? | None | None |
| VOC_register ed_code_syst em | inUMLS | None | None | None | None |
| VOC_register ed_code_syst em | systemSpecificLocatorInf <br> o | None | None | None | None |
| VOC_register ed_code_syst em | uri | None | None | None | None |
| VOC_register ed_code_syst em | isExternal | None | None | None | None |
| VOC_value_s et | valueSetld | valueDomain.registeredName | None | None | None |
| $\begin{aligned} & \text { VOC_value_s } \\ & \text { et } \end{aligned}$ | valueSetName | valueDomain. valueDomain | Name is the key in LexGrid, and is optional in HL7 - will need to be addressed. | None | None |
| $\begin{aligned} & \text { VOC_value_s } \\ & \text { et } \end{aligned}$ | basedOnCodeSystem | valueDomain. defaultCodingScheme | Optional in HLT, required in LexGrid. | None | None |
| VOC_value_s et | description | valueDomain.entity Description | None | None | None |
| ```VOC_value_s et``` | definingExpression | None | Not used. | None | None |
| VOC_value_s et | allCodes | if 'true': valueDomain.conceptCode = "@", valueDomain.includeChildren='true' | None | None | None |
| VOC_value_s et | isTaxonomicSet | None | No mapping available | None | None |
| VOC_value_s et | valueSetAuthority | None | Included in valueSetID | None | None |
| VOC_value_s et | valueSetNumber | None | None | None | None |
| VOC_value_s et_constructor | usedToBuildValueSet | new valueDomainEntry(parent = valueDomain [valueSetld=current()/.], id=unique()) | None | None | None |
| VOC_value_s et_constructor | includesOrExcludesSet | valueDomainEntry.includesValueDomain | None | None | None |
| VOC_value_s et_constructor | includeHeadCode | valueDomainEntry.isSelectable | None | None | None |

| VOC_value_s et_constructor | includeHeadCode | ```valueDomainEntry. conceptCode = VOC_code_reference [usedToBuildValueSet=curr ent(). usedToBuildValueSet and isHeadCode=true]. referencesConceptCode``` | Assumes that there always is a head code. | None | None |
| :---: | :---: | :---: | :---: | :---: | :---: |
| VOC_vocabul ary_domain_v alue_set | representsVocDomain | (selector) | None | None | None |
| VOC_vocabul ary_domain_v alue_set | definedByValueSet | codingscheme['VocabularyDomain'].concept [representsVocDomain].property['definedByValueSet']. text | have to get 'represents VocDomain' into supportedProperty header | None | None |
| VOC_vocabul ary_domain_v alue_set | appliesInContext | codingscheme['VocabularyDomain'].concept [representsVocDomain].property['definedByValueSet']. usageContext | Have to get all the contexts in the VocabularyDomain supportedContext header | None | None |
| VCS_release_ version | releaseld | codingSchemeVersion.version | (i) Note <br> This is not the way that things are done at the moment. At the moment, VCS_release_versions are loaded into systemRelease. Entered if one or more concept/relationship change. | None | None |
| VCS_release_ version | releaseld | valueDomainVersion.version | Set iff one or more value sets change | None | None |
| VCS_release_ version | literal("false") | codingSchemeVersion.isComplete | All versions are delta's in this model | None | None |
| VCS_release_ version | releaseAgency | None | None | None | None |
| VCS_release_ version | releaseDate | codingSchemeVersion.versionDate | None | None | None |
| VCS_release_ version | releaseDate | valueDomainVersion.versionDate | None | None | None |
| VCS_release_ version | description | codingSchemeVersion.entityDescription | None | None | None |
| VCS_release_ version | description | valueDomainVersion.entityDescription | None |  |  |
| VCS_release_ version | editorID | None | There is no place for these currently. | None | None |
| VCS_release_ version | forWhomID | None | None | None |  |
| VCS_release_ version | concat('urn:oid: 2.16.840.1.113883:', systemRelease. releaseld) | None | This corresponds to the containing system release when the sytem release occurs. It is empty until then. | None | None |

## LexGrid Text Mapping

The following table lists Source Definition column contents.

| Line | Source Definition Column 1 | Source Definition Column 2 | Source Definition Column 3 | Source Definition Column 4 | Source Definition Column 5 | Source Definition Column 6 | Source Definition Column 7 | Source Definition Column 8 | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | <codingSchemeN ame> | <codingSchemeld $>$ | <defaultLanguage $>$ | <formalName> | [<version>] | [<source>] | [<description>] | [<copyright>] | This must be the first line. It contains the coding scheme metadata. |
| 2 | [<code>] | <name> | [<description>] | None | None | None | None | None | Beginning of concepts in coding scheme. |
| 3 | None | [<code>] | <name> | [<description>] | None | None | None | None | Represent hierarchical 'hasSubtype' relationship nesting (name hasSubtype name) |

| Text Element Coding <br> Scheme | LexGrid | Comments |
| :--- | :--- | :--- |
| codingSchemeName | codingScheme. <br> codingSchemeName | No comments |
| codingSchemeld | codingScheme.codingSchemeld | No comments |
| defaultLanguage | codingScheme.defaultLanguage | No comments |
| formalName | codingScheme.formalName | No comments |

| version | codingScheme.representsVersion | Optional |
| :--- | :--- | :--- |
| source | codingScheme.source | Optional |
| description | codingScheme.entityDescription | Optional |
| copyright | codingScheme.copyright | Optional |

| Text Element <br> Concepts | LexGrid | Comments |
| :--- | :--- | :--- |
| code | concept.conceptCode | Optional |
| name | concept.conceptName | No comments |
| description | concept. <br> entityDescription | No comments |
