

LIDC Conversion to AIM Meeting Notes 2009-04-02

Agenda for 4/2/2009:

1. Update from Qinyan on progress/roadblocks
2. Review of Wiki
3. Preparation for 4/14 IVI vocab meeting.
4. Discuss Vasari feature spreadsheet conversion (Need to add additional fields?)

Discussion points:

1. Vasari update
 - a. Qinyan has created a spreadsheet to suggest how the TJU elements could be mapped into AIM
 - i. Emailed Daniel Rubin in regards to whether the "comments" provided by TJU should be mapped to TextAnnotation or ImageAnnotation-Comment
 - ii. Emailed Adam Flanders about Feature1. In some places it's scored with multiple numbers - does this mean the tumor spans multiple locations?
 - iii. Added in the names of the Features into Qinyan's spreadsheet
 - iv. John Freymann proposed setting up a meeting with TJU, UCLA, and relevant AIM/Radlex/VCDE people to review the feature list and help propose proper course of actions
 - b. Tony Pan suggested contacting UCLA about their input with regards to this since they're also doing a GBM project
2. Justin uploaded discussed documents to the wiki, posted meeting notes
3. Discussed IVI vocab meeting
 - a. Suggested inviting Adam Flanders to join in case questions come up about the information he recorded

Action Items:

1. Qinyan/Jennifer to find out more about RadLex API
2. Qinyan/Jennifer to also investigate pulling permissible values via caDSR API
3. John/Justin to contact Adam Flanders and other relevant people to attend 4/14 IVI vocab meeting
