

Downloading Files in Archive Format

Some component downloads are in ".RAR" and ".WAR" archive file compression formats.

RAR is a proprietary archive file format that supports data compression, error recovery, and file spanning. Both proprietary and free programs are available for accessing such files. A tutorial on accessing .RAR files, including a free extractor, is [available](#) 

WAR files (short for Web application Archive) are Java archive files used for packaging and distribution of Web applications. WAR files often contain a collection of JavaServer Pages, Java Servlets, Java classes, XML files, tag libraries, and static Web pages (HTML and related files).

- More information on WAR files can be found [in the WAR file format article on Wikipedia](#) 
- Refer to this [background information on Java Web applications](#) 

For a specific guide to implementing the AIM Template Creator software and deploying .WAR files, refer to the [AIM Template Software Setup Manual](#).
