

# caArray 081 - caArray and calIntegrator2 sharing the same version of the UPT application

Question: Can caArray and calIntegrator2 share the same version of the UPT application?

**Topic:** caArray Installation and Upgrade

**Release:** caArray 2.4.0

**Date entered:** 04/20/2011

## Details about the Question

We had previously installed caArray - v2.2.1, and UPT - v3.2.0. Recently, we added calIntegrator2 - v1.0 on Redhat 5. They are all on one machine using the same mysql instance. However, we couldn't provision additional calIntegrator2 users.

## Answer

Both caArray, calIntegrator2 are using UPT and CSM as their provision tools. Since the applications were developed independently, they might be requiring a different versions of UPT and CSM. In order to share the same UPT application, it is important to have the UPT installation to be the highest version required by the applications. UPT is backward compatible to the previous version used by the other applications.

## Comparison of UPT requirement

The table below compares the available versions of each application, and their corresponding UPT version used. If the caArray and calIntegrator applications are installed on the same server, the highest version of UPT and CSM should be installed.

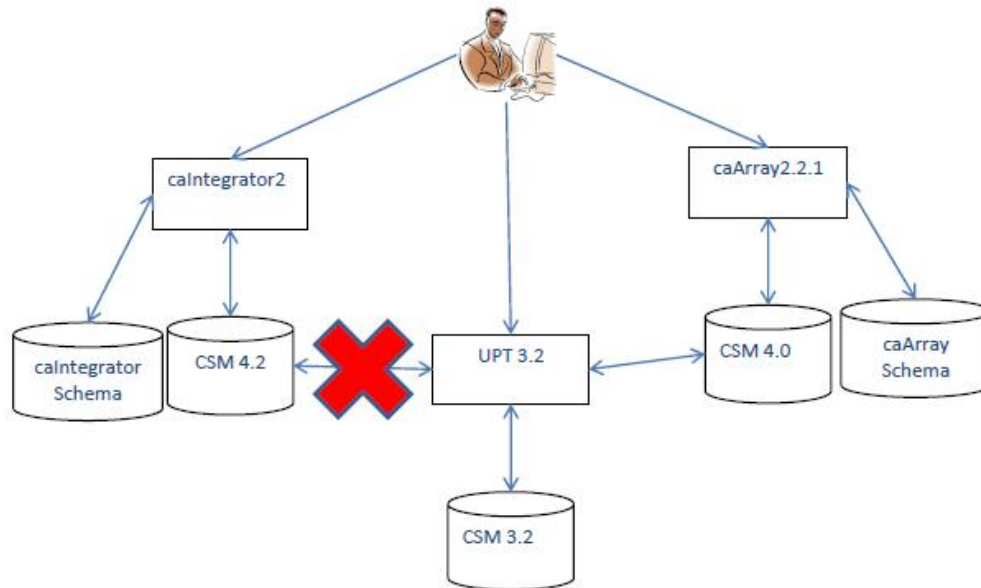

### UPT Compatibility

Application	CSM Version	UPT Version	UPT Upgradable?
caArray 2.2.X	CSM 4.0	UPT 3.2	Yes <a href="https://wiki.nci.nih.gov/pages/editpage.action?pageId=42832484#">https://wiki.nci.nih.gov/pages/editpage.action?pageId=42832484#</a>
caArray 2.3.X	CSM 4.0	UPT 3.2	Yes
calIntegrator2 1.0	CSM 4.2	UPT 4.2	N/A

## Find the highest UPT version

The pictures below illustrate the UPT version requirement by caArray and calIntegrator2. The pictures are the courtesy of Vijay Parmar of the UPT/CSM Team. UPT 3.2 will not work; UPT 4.2 will work.

# Current – Wont work

# Proposed – Will work

## Upgrade UPT without upgrading caArray

Upgrading an existing UPT 3.2 to UPT 4.2 can be done via the automated UPT installer (GUI or command line). You can download the [UPT installers](#).

The UPT installation and deployment section in the CSM Guide outlines the steps to successfully upgrade an existing UPT 3.2 to UPT 4.2.

After UPT is upgraded from 3.2 to 4.2, it is also necessary to change the caArray Install.Properties file to reflect the new CSM version:

Previous CSM version: Application CSM Version=3.2  
Change to: Application CSM Version=4.2

For detailed information on how to configure caArray, read [Post Installation Tasks](#).
