

Adding a Template Component 2.0

1. Click the **Templates** tab.
2. In the Templates panel, select the template to which you want to add a component.
3. In the Template Components panel, right-click the template name. A window appears that shows the template components you can create.

You can also access these options in the toolbar below the Template Components panel.

4. Create a [anatomic entity](#), [imaging observation](#), [inference](#), [calculation](#), [geometric shape](#), or [tag](#).
