

Searching for a Template Group 2.0

When you search the AIM Template Service for a template group that you want to modify in ATB, you import it at the same time. You do not have to take a separate step to download the template group. Once you find the template group in the search results, click it to begin using it in ATB.

1. Click the **Template Groups** tab.

2. Below the left panel, click  **Unknown Attachment** and then select **Search Groups**. The Template Groups Search page appears.

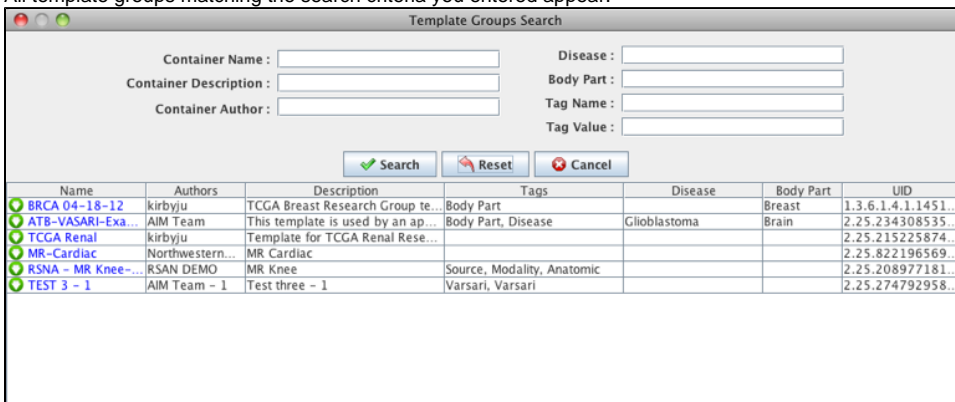

Name	Authors	Description	Tags	Disease	Body Part	UID
------	---------	-------------	------	---------	-----------	-----

3. Narrow your search by entering information into the fields. If you do not enter any information into the fields, all template groups available in ATS appear, and it may take longer to see the results of your search. The following fields are available.

Field	Description
Container Name	Template group name
Container Description	Template group description
Container Author	Person who created the template group in the AIM-enabled application
Disease	Disease that is the topic of the templates in the template group
Body Part	Body part that is the topic of the templates in the template group
Tag Name	A name associated with this template group
Tag Value	The value associated with the tag name for this template group

4. Click **Search**. All template groups matching the search criteria you entered appear.

Name	Authors	Description	Tags	Disease	Body Part	UID
BRCA 04-18-12	kirbyju	TCGA Breast Research Group te...	Body Part		Breast	1.3.6.1.4.1.1451...
