# Creating a Question 1.0

AIM templates include a set of questions and one or more answer choices for each question.

1. Add a template component.
2. Right-click the template component and select **Create Question**. You can also find this option in the toolbar (

    ? Unknown Attachment

    ).
    A new panel appears on the right and the toolbar below the Template Components panel changes to provide options for question, which are to

    add or delete a question ( ? Unknown Attachment ).

    ? Unknown Attachment

3. Provide information about the question.

    | Field | Description |
    | --- | --- |
    | Code Meaning | The lexicon term you want to use in the question |
    | Code Value | The value of the lexicon term |
    | Schema Designator | The organization that created the schema |
    | Schema Version | The version of the schema you are using |

    In this version of ATB, a question is defined as a concept code. This means that you will have to select a concept code from a list of existing lexicons from your local ATB. If you don't have a concept code defined, which you probably don't have in your local ATB, you will have to create your private lexicon that consists of your set of questions.

    > ⓘ **Example**
    >
    > You may want to create the following question: `Where is a tumor located?`
    > You may define the question as follows.
    >
    >   a. Create a lexicon called `My private questions`.
    >       i. Select the Lexicon tab.
    >
    >       ? Unknown Attachment
    >       ii. Click                                          to add a new lexicon.
    >       iii. Enter the metadata as follows:
    >           Name: `My Private Lexicon`
    >           Schema Designator: `MPL`
    >           Schema Version: `1.0`
    >           Description: `My private lexicon`
    >           Authors: `NCI`
    >       iv. Click **Save**.
    >
    >       ? Unknown Attachment
    >   b. Click                                       to add a new term.
    >   c. Enter the metadata as follows:
    >       Code Meaning: `Where is the tumor?`
    >       Description: `Identify where the tumor is on the image or images.`
    >       Code Value: `MPL-0001`
    >   d. Click **Save**. You can now use this question concept code.

4. Click **Save**.
5. Add valid terms to the question. Valid terms are lexicon entries that you want to reference in a question in the template.
